U. S. Nuclear Regulatory Commission
Attention: Document Control Desk
Washington, D.C. 20555

Gentlemen:

Subject: **Docket Nos. 50-361 and 50-362**
Additional Information on the Individual Plant Examination (IPE)
TAC Nos. M74464 and M74465
San Onofre Nuclear Generating Station Units 2 and 3

Reference: August 15, 1994, letter from Mel B. Fields (NRC) to Harold B. Ray (Edison), Subject: Request for Additional Information on the Individual Plant Examination (IPE) for San Onofre Nuclear Generating Station, Units 2 and 3

By the referenced August 15, 1994 letter the NRC requested that Southern California Edison (Edison) provide responses to questions related to the internal event analysis of the Individual Plant Examination (IPE) for San Onofre Units 2 and 3 within 60 days of the referenced letter (by October 14, 1994). Because the Edison probabilistic risk assessment staff is deeply involved in activities related to the Individual Plant Examination of External Events (IPEEE), compliance with the 60-day response time would require extensive use of outside consultants. Edison believes it is preferable to utilize in-house staff in responding to the questions rather than outside consultants to maximize the quality of the response, minimize the cost, and to insure that any experience gained is retained within Edison.

Therefore, an extension of the due date to December 13, 1994, 120 days after the date of the referenced letter, is requested.

Sincerely,

Walter C. Marsh
