Washington, D.C. 20555

References: 1) License TR-1, Docket 50-70.
2) Request for Renewal of License TR-1; October 21, 1975.
3) Letter, G. E. Cunningham to H. R. Denton with License TR-1 renewal information and proposed Technical Specifications; June 26, 1985.

Dear Dr. Denton:

On June 26, 1985, the General Electric Company submitted supplemental license renewal information including proposed Technical Specifications for the shut down General Electric Test Reactor facility. As the result of conversations with your staff and Region V, the enclosed modified pages are hereby submitted. Changes are identified by a black vertical line in the right-hand margin.

The changes were the addressing of the storage and ultimate disposal of liquid effluents (Technical Specification 3.7) and the elimination of area radiation monitors as a Technical Specification item (Technical Specifications 3.7 and 4.7). The monitors are not necessary as all fuel has been removed from the facility and ALARA would not be served by maintaining and calibrating equipment in an unoccupied facility. This is consistent with the requirements at the deactivated VBWR and EVESR facilities.

Sincerely,

G. E. Cunningham
Senior Licensing Engineer
