Event No.: NA
Event Location Code: POW

SUBJECT: Indian Point 2 Steam Generator Outage Extended to
Conduct Refueling

Con Edison has announced to onsite personnel their intent to begin immediate preparations to enter the Indian Point Unit 2 refueling outage which had been planned for late May. The plant has been in cold shutdown to conduct steam generator tube inspections after a tube failure occurred in the No. 24 steam generator on February 15, 2000 and resulted in the declaration of an Alert (reference Event No. 36695). Based on examinations completed as of March 23, Con Edison classified the inspection results for steam generators 21 and 24 to be in Category C-3 per Technical Specification 4.13, which requires Con Edison to obtain NRC approval prior to startup. Considering a number of factors, such as the time needed to complete additional examinations and an operational assessment of the steam generators, Con Edison management decided to begin the refueling outage at this time.

Con Edison does not plan to issue a press release. The Region I Public Affairs is prepared to respond to media inquiries.

The State of New York has been informed.
