Comments on the Draft Environmental Impact Statement for the Construction and Operation of an Independent Spent Fuel Storage Installation on the Reservation of the Skull Valley Band of Goshute Indians and the Related Transportation Facility in Tooele County, Utah (NUREG-1714, Docket No. 72-22, Private Fuel Storage, L.L.C., June 2000).

September 21, 2000

72-22

To: Mr. David L. Meyer

Division of Freedom of Information  
Office of Administration  
Mail Stop T-6D-59  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555-0001

My name is Kevin Kamps, Nuclear Waste Specialist at Nuclear Information & Resource Service (NIRS) based in Washington, D.C. NIRS is the information and networking center for citizens and environmental organizations concerned about nuclear power, radioactive waste, radiation, and sustainable energy issues. I submit these comments on behalf of our thousands of members in all 50 States.

I have submitted oral comments on behalf of my organization at the July 27<sup>th</sup> Salt Lake City hearing and the July 28<sup>th</sup> Grantsville hearing. The following written comments are in addition to the earlier ones.

The Draft Environmental Impact Statement (DEIS) on Private Fuel Storage (PFS), led by the U.S. Nuclear Regulatory Commission (NRC), is fatally flawed in terms of its public comment process and the contents of the document itself.

The NRC has held only three public hearings, all in Utah. What about all the other States through which the 4,000 containers of highly radioactive waste would be transported? Maps generated by Dr. Marvin Resnikoff of Radioactive Waste Management Associates using the INTERLINE computer code show that communities in 18 corridor States – Alabama, California, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Minnesota, Nebraska, Nevada, New Jersey, New York, Pennsylvania, Ohio, Tennessee, Wisconsin, and Wyoming – would most likely be subjected to shipments of high-level atomic waste from reactors belonging to PFS member utilities bound for Utah. In fact, the very large proportion of the PFS shipments that would pass through Illinois, Iowa, Nebraska, and Wyoming would mean that these States would be nearly as heavily impacted by transport as would be Salt Lake City itself, which has had TWO public hearings. Why have none of these other States received a hearing? At a minimum, hearings should be held in Gary, IN; Chicago, IL; Des Moines, IA; Omaha, NE; and Laramie, WY. These are major population centers located directly on the targeted rail routes.

ADM03

In addition, as the NRC DEIS case study of a high-level atomic waste shipment from the Maine Yankee nuclear reactor shows – once PFS opens its doors to non-member nuclear utilities' wastes, dozens of more States could suddenly find themselves subject to

Template ADM03

ERDS 03  
add Scott Klamers  
(SCF)

unprecedented numbers of commercial irradiated nuclear fuel shipments and the associated risks to health, property, and the environment. The NRC has not consulted with nor even notified the public and elected officials in these States about the DEIS on PFS. Moving 40,000 tons of high-level atomic waste – nearly all that currently exists in the U.S. – beginning as early as 2003 constitutes such a significant federal action that communities along transportation routes deserve hearings just as much as the citizens of Utah. St. Louis, MO is a community projected to receive large numbers of commercial high-level nuclear waste shipments, and deserves a public hearing.

The State of Nevada bears special mention. Given PFS's plan to "return to sender" any contaminated or problematic shipping containers or canisters, and given NRC's apparent decision to pre-maturely declare Yucca Mountain, Nevada the nation's permanent repository for high-level nuclear waste (both these issues are addressed further below), it is possible that Nevadans could see single shipments of high-level nuclear waste pass their doorstep a total of four times each. That would amount to a multiplication of transport risks to Nevadans that this DEIS does not address. In addition, Nevada's unique position of being singled out for consideration for serving as the national repository – despite Statewide opposition – should mean that Nevadans deserve special consideration from NRC. This is especially true when this DEIS repeatedly refers to Yucca Mountain as the repository, as if the decision has already been made. In addition, licensing PFS would have very significant political consequences for Nevada. Once high-level nuclear wastes would be transported 7/8ths of the way from eastern reactors to Utah, the political pressures to go ahead with Yucca Mountain despite its severe scientific unsuitability would be immense. For all of these reasons, Nevadans deserve at least two hearings on this DEIS, in Las Vegas and northern/rural Nevada.

Given that copies of the DEIS were not even readily available in Utah until well over a month into the public comment period, and that transport corridor States have not yet even been notified by NRC about the DEIS on PFS, NRC should extend the public comment. Given that the DEIS repeatedly refers the reader to the NRC's Safety Evaluation Report concerning such significant issues as earthquake risks – even though the SER has not yet been published, and won't be available until after the public comment period closes – the public comment period should be extended. Similarly, the PFS Safety Analysis Report and Environmental Report, repeatedly referred to in the DEIS, are all but inaccessible to members of our organization, members of the public, and even to our office here in Washington, D.C. The NRC Public Document Room – which happens to be closed right now when the public comment deadline falls – informed me that I can obtain my own copy of the SAR and ER, for the sum of \$121.50 and \$52 respectively. My organization cannot afford that, let alone individual concerned citizens. The ADAMS system does not work, not only for members of the public, but not even for members of the NRC's own staff. Given the inaccessibility of the SAR and ER, the deadline should be extended, and those documents made widely available to concerned citizens. Utah Senator Robert Bennett has requested a 120 day extension. A coalition of Utah mayors has requested an extension of six months. A grassroots coalition of concerned citizens represented by Citizens Opposed to Radioactive Waste in Utah has requested an extension. Nearly 1,500 people, their signatures on the attached petitions, living along targeted transport routes, also request an extension and hearings in their communities. For all of the reasons cited above, and the fact that transporting the entire

current inventory of commercial irradiated nuclear fuel across country is an unprecedented major federal action, an extension of at least 120 days is reasonable.

The NRC in its DEIS has not even published the environmental and economic impacts from severe accidents involving rail shipments bound for PFS. Using the federal government's own "RADTRAN 4" computer model and assuming the accident would take place in a "low-density" urban setting such as Salt Lake City, Dr. Marvin Resnikoff of Radioactive Waste Management Associates has calculated that a severe PFS rail shipment accident releasing just a small fraction of the radioactive contents of a cask carrying 5-year-old cooled irradiated nuclear fuel would result in over 115 latent cancer fatalities to exposed individuals; the economic costs of emergency response, evacuation, interdiction and clean-up (as much as clean-up is even possible) could be between \$14 billion and \$24 billion. Using the government's "RADTRAN 5" model, with its more in-depth economic cost analysis, Dr. Resnikoff calculated that a severe rail accident in a more dense urban area could lead to over \$300 billion in economic costs. All economic impacts over a much lower amount (is it \$7 billion, or \$9.5 billion?) become the liability of the American taxpayer, under the Price-Anderson Act. The NRC must calculate and publish the full economic and health impacts from a severe accident in both urban and rural settings for all the projected transport routes. Full health impacts would include not only latent cancer fatalities, but non-fatal cancers, birth defects, genetic damage, lowered immunity, and many other radiation-induced diseases. The children of Chernobyl -- still 15 years after the 1986 nuclear catastrophe -- in Belarus, Ukraine, and western Russia bear witness to the wide gamut of adverse health impacts that result when fission products are released into the living environment. Again using conservative government models, Dr. Resnikoff predicts that 25 transport accidents with fully loaded casks bound for Skull Valley can be expected -- many of them minor, but perhaps some severe.

NRC's reliance on NUREG 0170 from 1977 and the 1987 Modal Study for risk estimates in this DEIS is unsound, because the irradiated nuclear fuel transport container testing standards upon which they are based are unsound. The testing standards are extremely outdated, and do not represent real-life accident potentials. For instance, the 30 foot drop onto an unyielding surface represents only a 30 mile per hour impact. In Nebraska, those familiar with the rail system report that train speed limits are as high as 70 miles per hour. How fast would rail shipments to PFS travel? Undoubtedly, across the U.S., there are surfaces near railways that are unyielding, including concrete bridge abutments and hard rock surfaces, sometimes located a great height beneath bridges. Where are such bridges located? How many are there on the way to Utah from eastern reactor sites? Has NRC and DOT traveled the routes to identify such potentially dangerous locations? The drop test dates back to the early 1960's, and does not represent real life conditions on rails today. Similarly, the fire test -- 1,475 degrees for 30 minutes -- dates back to 1947, and represents to temperature of a house fire. Combustibles on or near railways in the year 2000 include chemicals with burning temperatures much higher than 1,475 degrees. Diesel fuel, for instance, burns at 1,800 degrees. Real life train fires have burned for much longer than 30 minutes. Some have burned for many days. Has NRC and DOT tested to destruction the Holtech HI-STAR casks that would be used? Are there combustibles on the rails that could achieve such destructive forces? The Holtech HI-STAR transport containers are not required to undergo full-scale physical tests. Tests

have only involved computer simulations. This is far from a rigorous cask safety testing program. The estimates of transport risk in this DEIS are severely underestimated.

Espousing a "Start Clean, Stay Clean" philosophy, PFS has no plan to build a "spent" fuel pool nor a hot cell for dealing with contaminated or defective casks at its "interim storage site" in Utah. The PFS proposal is to "return to sender" any problem casks, shipping the fully loaded containers back to the nuclear reactor from which they came. Contaminated casks are a very real issue: 49 incidents of "accidental surface contamination" between 1965 and 1992 alone according to the U.S. Department of Energy; innumerable more have occurred in Europe and Japan (it's hard to arrive at a total sum, because the industry and the government agencies have covered up the information). Again using NRC's own case study of a shipment from Maine Yankee nuclear reactor to PFS, a single shipment of irradiated fuel could be sent to Utah. If found to be "unclean," it could then be shipped all the way back to Maine. Once "cleaned" there, it could be shipped back to Utah. Given the added distance shipped, this would increase transport risks threefold. Defective or contaminated casks would also represent higher risks than "perfect" casks. NRC's DEIS has not taken any of this into consideration. NRC has also not considered that rail cars with three axles (which PFS proposes to use because of the extremely heavy weight of its transport casks) have a higher accident rate than the standard two-axle rail cars. Imperfect casks are an all too real experience in the U.S. In just the first decade of dry cask storage, numerous defects and early degradations have been identified in dry casks across the country. Dry casks go zero miles per hour, but transport casks could go 70 miles per hour, creating much greater risks to the public and the environment. This signals serious faults in the NRC cask certification process, as well as poor quality assurance and quality control in the cask manufacturing and nuclear power industries. These same players are the very ones undertaking the proposed PFS, which does not support the DEIS assumption that the Holtech HI-STAR transport casks will function perfectly. Didn't Holtech recently identify flaws with its neutron shielding materials in recent months? Has NRC considered the possibility that "incident-free" doses to members of the public and workers would increase if flawed shielding materials are used in the transport and storage containers?

NRC's DEIS has done a poor job of calculating radiation doses to the public from even "incident-free" transports. To completely contain all the radiation emanating from the waste would require so much dense shielding material such as lead that the container would be too heavy to transport. Thus, the rail shipment casks would be like mobile x-ray machines that cannot be turned off rolling down the tracks exposing everyone nearby to gamma and neutron radiation. For instance, a nearly 50 mile long stretch of Interstate 15 in Utah closely parallels the proposed rail route to Skull Valley, hugging the tracks to within a very short distance. A car driving next to a shipment of high-level waste could conceivably travel next to the "mobile x-ray machine that can't be turned off" for a full hour. How many other places across the country do the tracks hug the highways, or pass close by residential neighborhoods or business districts? The NRC does not address such specific questions about public exposures in its DEIS.

An issue that seems to not be addressed anywhere in the DEIS is the loss of property value along targeted transportation routes. All indications are that property value loss is a very serious and real socioeconomic consequence of high-level radioactive waste transportation.

PFS and NRC call the proposed dump an "interim storage site" for high-level atomic waste – if one can call 40 years "temporary". But what if the Yucca Mountain, Nevada national permanent repository fails to open? At a number of points in the DEIS, NRC names Yucca Mtn. as the permanent dump, as if the decision has already been made. This is a shameful betrayal of NRC's promise to the people of Nevada and the rest of the country that it would not license Yucca Mtn. until due process and scientific soundness were completely achieved and confirmed by a rigorous licensing regimen. The Dept. of Energy has not even completed its site characterization process at Yucca Mtn. – NRC's licensing process is still many years away, but it seems NRC has already given Yucca Mtn. the green light! Even if NRC were to license Yucca Mtn. despite its severe scientific shortcomings, its 63,000 metric ton capacity for commercial high-level waste cannot contain the 86,000 tons that are projected to exist in the U.S. in decades to come. The excess wastes might very well remain in Utah – sitting out in the open under the sun, snow and rain – because there is no place else to take them.

There is absolutely no need for the PFS facility in Utah. Its proposed dry cask storage plan is the very same technology already in use at more than a dozen nuclear power plants across the U.S. The NRC has licensed at-reactor dry cask storage for up to 100 years. So what's with the rush to Skull Valley, UT with all the added transportation risks? It is true that dry casks already in use at reactors have suffered from early degradation and manufacturing defects. This is all the more reason to put the brakes on PFS – such problems with zero mile per hour, stationary storage casks at reactors are much less dangerous than similar problems with 70 mph transport casks traveling the rails through American communities. NRC regulations must be changed so that the public has a meaningful voice in at-reactor dry cask storage decisions, and so that dry casks at reactors are manufactured, used, and maintained to lower the inherent dangers as much as possible. In addition, the longer high-level wastes are allowed to cool down at the reactors where they presently are, the more they will radioactively decay and the less dangerous they will be to transport in the future, if and when scientifically sound, publicly acceptable means for off-site storage are found in the future.

NRC's DEIS states that there would be small impacts on environmental justice from the proposed PFS, that "there are no disproportionately high and adverse impacts on low income or minority populations," and that members of the Skull Valley Band would benefit from the PFS lease payments and employment. However, tribal chairman León Bear has already restricted PFS monies from traditional tribal members who oppose the dump. Given the pattern of targeting Native American tribes for high-level nuclear waste dumps, and the centuries of genocidal treatment of the Goshutes by white settlers, the State and federal governments, it is scandalous, shameful and absurd that NRC claim that dumping the entire current stockpile of high-level wastes on this reservation does not violate environmental justice. Irregardless of the lease payments to the tribal council, PFS represents blatant environmental racism targeted at a low income, minority population that already shoulders a disproportionate toxic load – the Skull Valley Goshutes reservation is surrounded by numerous toxic facilities spewing poisons into the air, water and soil. As Serpent River First Nation environmentalist Keith Lewis has said, looking at the present radioactive and toxic aftermath of 50 years of uranium mining on his people's Ontario reservation, "There is nothing moral about tempting a starving man with money." Utahns have also already suffered for decades as downwinders from nuclear weapons

tests in Nevada. Decision-makers in Washington, D.C. at NRC's predecessor agency, the Atomic Energy Commission, found it expedient to inflict radiological health damage on the expendable, "low-use segments of the population" in predominantly rural, Mormon Utah. NRC's finding of no environmental justice impact from PFS adds insult to injury.

The reservation in Skull Valley, the tiny patch of land still left to the Goshutes from their once vast territory after 150 years of genocidal treatment at the hands of the federal and State governments and the white settlers, is already surrounded by numerous toxic facilities such as U.S. Army nerve gas and chemical weapons incinerators, the Envirocare "low level" radioactive waste dump, a U.S. military biological weapons proving ground and bombing range, and a magnesium factory whose hydrochloric acid emissions made it the single worst air polluter in the entire country. NRC dismissed the dismal quality of the air in Skull Valley as insignificant. How can NRC disregard the poisons in the air, water, soil and people's bodies within Skull Valley? NRC has not addressed the cumulative impacts upon the health of the Skull Valley Goshutes of adding a high-level nuclear waste dump on top of all these toxic facilities already spewing poisons into the air they breath. For the Skull Valley Goshutes, radioactivity would be the modern day small pox blanket.

The treatment of environmental justice is so absurd in the DEIS that all that can be said is "the emperor wears no clothes!" Environmental racism is at the heart of the PFS proposal, and the DEIS tries to completely overlook this elephant in the middle of the living room. Another aspect of environmental injustice is the attempt by nuclear utilities in the eastern U.S. to dump their deadly poisons on less populated (and thus more politically and economically vulnerable) States out west like Utah. The federal government -- both the U.S. Congress and the Department of Energy -- are guilty of the same attempt at exploitation, only targeting Nevada for the permanent dump. This is the regional equivalent of racism. Given that Yucca Mountain is Western Shoshone land and Skull Valley is Goshute land, it is also racism, pure and simple. The exploitation of the economically destitute by well-funded government agencies and corporations makes it classism as well. Shame on all those involved in tempting the starving man with money to do something he otherwise would not do.

Yucca Mountain is repeatedly named as the final repository. Yet, nowhere in the DEIS could I find estimates of risks to Nevadans from unloading the PFS waste into their State. Did I miss that section, or did NRC fail to include it?

Both the Transportation Impacts and the Environmental Justice sections of the DEIS have inspired me to read the book How to Lie with Statistics.

Given that the Transportation sections do not identify what routes would be used, the DEIS is incomplete, and should not be finalized. Transport would be a major environmental impact of the proposed action. To delay naming routes until after the PFS license is granted is a political ploy to keep concerned citizens in the dark until it is too late for them to voice effective opposition to ship nuclear waste through their communities across the country. The route maps must be published.

A major problem with the transport risk estimates in the DEIS is that they seem to focus almost exclusively on getting the wastes to Utah. There seems to be very little risk or dose analysis for removing the wastes from Utah. But of course it would take as many shipments to empty the site as it would to fill it -- 4000 canisters coming and going. What

about those "exiting" transport risks and "incident-free" doses? Doesn't that at least double all risks and "incident-free" doses automatically?

On page 5-53, the DEIS states "if a sabotage event that results in releases did occur, it is the judgement of the NRC staff that the consequences would not be unacceptably large." Why does this statement remind me of the Atomic Energy Commission's judgement that atmospheric atomic weapons testing upwind from "low use segments of the population" such as Mormons in Utah and Marshall Islanders in the South Pacific was acceptable? Why does it remind me of Secretary of State Madeleine Albright's statement that the "price" of economic sanctions against Iraq – hundreds of thousands of dead Iraqi children – "was worth it"? Are some peoples' lives and health worth less than others'. Granted, that's slightly misreading the statement given the context. But giving NRC the benefit of the doubt and reading the statement as NRC meant it, it is still obvious that NRC is downplaying the seriousness of the risk of sabotage, attempting to ignore the issue. This is not acceptable.

In a recent speech marking the 175<sup>th</sup> anniversary of the Bureau of Indian Affairs, agency director Kevin Gover formally apologized to Native Americans for the genocidal practices his predecessors had perpetrated against their people, and pledged to never repeat such practices.

He invoked the names of shameful massacres, and said "Never again will this agency stand silent when hate and violence are committed against Indians. Never again will we allow policy to proceed from the assumption that Indians possess less human genius than the other races. Never again will we be complicit in the theft of Indian property. Never again will we appoint false leaders who serve purposes other than those of the tribes. Never again will we allow unflattering and stereotypical images of Indian people to deface the halls of government or lead the American people to shallow and ignorant beliefs about Indians. Never again will we attack your religions, your languages, your rituals, or any of your tribal ways. Never again will we seize your children, nor teach them to be ashamed of who they are. Never again."

→ But dumping high-level nuclear wastes on a Native American reservation is a – albeit slightly more subtle and sophisticated -- 21<sup>st</sup> century version of these former atrocities. Future editions of the book Bury My Heart at Wounded Knee will include chapters on how the nuclear power industry and federal agencies targeted Native American tribes for nuclear waste dumps.

PFS and NRC seem to conclude that wildfires would not pose a threat to the ISFSI in Skull Valley. But the attempt by to force the country's high-level nuclear waste down the throat of the people of Utah against their will will inspire resistance across the country, which will spread like wildfire, and will ultimately put a stop to such environmental racism.

But actions  
speak louder  
than words

**NO RADIOACTIVE WASTE TRANSPORT THROUGH  
OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities — of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

**NO RADIOACTIVE WASTE TRANSPORT THROUGH  
OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities — of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

**NO RADIOACTIVE WASTE TRANSPORT THROUGH  
OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities — of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

## NO RADIOACTIVE WASTE TRANSPORT THROUGH OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!

We, the undersigned, are residents of corridor communities -- of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

**NO RADIOACTIVE WASTE TRANSPORT THROUGH  
OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities — of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities — of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

**NO RADIOACTIVE WASTE TRANSPORT THROUGH  
OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities — of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

**NO RADIOACTIVE WASTE TRANSPORT THROUGH  
OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities — of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities -- of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.

OUR COMMUNITIES TO SKULL VALLEY, UTAH!!!**

We, the undersigned, are residents of corridor communities — of neighborhoods and towns along the roads and rails that would be impacted by shipments of high-level radioactive waste if a radioactive waste dump is established on land owned by the Skull Valley Band of the Goshute Tribe in Utah.

We urge you: (1) to hold public hearings in our corridor communities regarding the Draft Environmental Impact Statement so that we can express our concerns to you about the transport of the wastes and the hazards of the proposed site; and (2) to extend the public comment period.
