

The U.S. Nuclear Regulatory Commission (NRC) invites your comments on the Draft Environmental Impact Statement for the Construction and Operation of an Independent Spent Fuel Storage Installation on the Reservation of the Skull Valley Band of Goshute Indians and Related Transportation Facilities

T2-22

1. To ensure your comments are appropriately considered, please indicate the sections or areas of the DEIS your comment(s) is directed toward?

Mainly Sections ~~2~~ 3, 4, 5

As pertaining to the environmental consequences / Transporting

2. Please state your comment(s)?

It is disturbing to note the ~~short sightedness~~ <sup>short sightedness</sup> of this industry (i.e. Nuclear Power). Having ~~no~~ plans for storage of the waste at the inception of these plants, they are now scrambling to find permanent storage options.

Transporting the waste is not an option! The communities that created the waste should move with waste. The people need renewable non-toxic energy sources QUICK, but this is ~~another~~ matter. However, the aforementioned sight problem forces me to make these comparative suggestions:

1. Having no plan for the disposal of this lethally toxic waste is a crime against humanity and every living thing. I must assume you're stupid if you cannot see the stupidity of this no plan approach to a very dangerous situation. Solar, wind, micro-hydro have benefits w/o impact.
2. Assuming now, lack of foresight and stupidity are the norm for this industry. How can we possibly assume these same people could be trusted to have a viable plan to safely transport this apocalyptically dangerous substance?

3. To receive a copy of the final EIS please provide your mailing address
