US NUCLEAR REGULATORY COMMISSION

Re: Independent Spent Fuel Storage Installation on the Skull Valley Reservation, UT

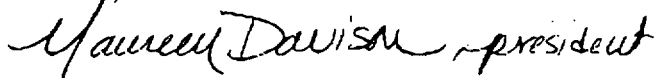

Dear NRC

I represent myself and other family property owners near the proposed 100-mile railroad corridor that you are considering to use to transfer spent nuclear fuel rods to the Skull Valley Reservation. I was just made aware of the project and the public comment period ending September 21, 2000 in the Salt Lake City Tribune dated 9/19/00.

I disagree that "there has been ample opportunity for public involvement ... review and comment". As a property owner in the North West Quadrant of Salt Lake City I was not given any notice or document about this project.

I agree with the Salt Lake Valley Mayors that there should be an extended public comment period and more studies to see the effects to private property values that this trip and the storage facility will have.

Sincerely,

Maureen Davison - president
