Chairman Meserve  
Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Chairman Meserve,

We note that you are planning hearings in the communities affected by the planned construction of the proposed MOX fuel factory at the Savannah River Site as part of the required Environmental Impact Statement. That is all well and good, but fails to take into consideration the potential impact which the use of MOX fuel could have on the communities in the vicinity of the reactors where the fuel will be utilized. Although the target date for final implementation of this project is many years in the future, a serious accident would impact the lives of all our citizens for future generations.

Despite the general paucity of public information generally available on this subject, we found that there were a great many people in Buncombe County, North Carolina, who were very concerned about the planned use of plutonium fuel in four of Duke Energy's nuclear reactors around the Charlotte area. The enclosed letters signed by 161 of our citizens speak for the demand for public hearings on this issue. Although the target date for final implementation of this project is many years in the future, a serious accident would impact the lives of all our citizens for future generations.

We ask that you give heed to the requests of our citizens. As part of the upcoming Environmental Impact Statement, we are convinced that it is your responsibility to expeditiously provide fair and thorough hearings with all points of view represented in Asheville and all major communities that could be affected by this experimental use of MOX fuel, whose plutonium is to be derived from nuclear weapons.

Sincerely yours,

Lewis E. Patrie, M.D., M.P.H.  
Chapter President

# CONCERNED CITIZENS FROM WESTERN NORTH CAROLINA

October 21, 2000

Nuclear Regulatory Commission  
Washington, D.C. 20555

Since we live about 100 miles from 4 nuclear power reactors that are under consideration for the use of plutonium fuel and in light of recent revelations, we are asking for public hearings in our community.

We are concerned about the withholding of information concerning a near disaster at one of Duke Energy's Catawba nuclear reactors, which took place in 1996 about which we just learned this week. Having withheld information from the public about potential risks from nuclear reactors could have profoundly impacted our lives here in Western North Carolina with no warning whatsoever.

We are appalled about this week's release that the U.S. Nuclear Regulatory Commission withheld information about four Duke Energy nuclear reactors within 25 miles of Charlotte, one of which came perilously close to a "critical" situation in 1996, due to a power failure lasting for a day and a half. We learned that during the power outage, only one of two backup generators was operational. In the event it had ceased to operate for as short a period of time as an hour, a significant risk of a meltdown would have occurred.

When we learned that these nearby nuclear reactors are four of just nine in the entire country that utilize "ice condensers" making them unusually vulnerable to Chernobyl-type accidents and that they happen to be the ones selected by the Department of Energy for the first experimental use of a fuel (MOX) containing plutonium oxide from dismantled nuclear weapons, we have grave doubts about the wisdom of their selection.

Considering the terrible consequences should such a tragedy take place, including lives lost, large numbers of people exposed to cancer causing radiation, the overwhelming burden of acutely and chronically ill people in need of medical care, the displacement of masses of people and the incalculable economic loss, we strongly request that public hearings take place in potentially affected communities, including right here in Asheville.

Washington, D.C. 20555

Since we live about 100 miles from 4 nuclear power reactors that are under consideration for the use of plutonium fuel and in light of recent revelations, we are asking for public hearings in our community.

We are concerned about the withholding of information concerning a near disaster at one of Duke Energy's Catawba nuclear reactors, which took place in 1996 about which we just learned this week. Having withheld information from the public about potential risks from nuclear reactors could have profoundly impacted our lives here in Western North Carolina with no warning whatsoever.

We are appalled about this week's release that the U.S. Nuclear Regulatory Commission withheld information about four Duke Energy nuclear reactors within 25 miles of Charlotte, one of which came perilously close to a "critical" situation in 1996, due to a power failure lasting for a day and a half. We learned that during the power outage, only one of two backup generators was operational. In the event it had ceased to operate for as short a period of time as an hour, a significant risk of a meltdown would have occurred.

When we learned that these nearby nuclear reactors are four of just nine in the entire country that utilize "ice condensers" making them unusually vulnerable to Chernobyl-type accidents and that they happen to be the ones selected by the Department of Energy for the first experimental use of a fuel (MOX) containing plutonium oxide from dismantled nuclear weapons, we have grave doubts about the wisdom of their selection.

Considering the terrible consequences should such a tragedy take place, including lives lost, large numbers of people exposed to cancer causing radiation, the overwhelming burden of acutely and chronically ill people in need of medical care, the displacement of masses of people and the incalculable economic loss, we strongly request that public hearings take place in potentially affected communities, including right here in Asheville.
