

TELEPHONE CALL TO: Dr. A. I. Snow
Sinclair Research Laboratories, Inc.
Harvey, Illinois

REBrinkman:mog
August 13, 1959

RE: Application 20597

Dr. Snow was called to discuss the necessity of conditioning his license to prohibit the use of byproduct materials in products distributed to the public. It was explained that the latitude given in research and development licenses was not intended to permit studies in full size plant processes or other uses which would result in licensable amounts of radioisotopes being transferred to members of the public. He stated that he did have programs which involve such use.

In the future he is to apply on a specific basis for projects of this type. It was explained that we were attempting to develop an amendment concerning the exemption of low concentrations, but that even on the adoption of this amendment, specific licenses would have to be obtained for this purpose.

Dr. Snow was reminded that incineration must now be provided for on a specific basis in a license. He stated that they no longer incinerate under License Number 12-140-4.
