Licensee Emergency Classification

☐ Notification of Unusual Event
☐ Alert
☐ Site Area Emergency
☐ General Emergency
☒ Not Applicable

SUBJECT: STOLEN PORTABLE GAUGE

DESCRIPTION:

On February 14, 2001, the Texas Bureau of Radiation Control (TBRC) notified Region IV by facsimile of a stolen portable gauge. The TBRC was informed by Drash Consulting Engineers, Inc., that a Humboldt Model 5001-C (Serial No. 1467) portable gauge containing (10 millicuries) cesium-137 source (Serial No. 692GH) and a 1480 megabequerel (40 millicuries) americium-241/beryllium source (Serial No. NJO1429) had been stolen. The licensee informed TBRC that a gauge was stolen from the back of a pickup truck that was parked at an apartment complex in Harlingen, Texas, between 10:00 a.m. and 1:00 p.m. on January 1, 2001. The gauge case was locked and secured in the truck bed with chains. When the driver returned to the truck, he noted that the lid of the gauge case was cracked open and the gauge was missing. The licensee promptly notified the device manufacturer and the Harlingen Police Department. The licensee also placed an ad in the local newspaper offering a \$500.00 reward for the return of the gauge.

The State of Texas has informed Mexico, the states of Arizona, Arkansas, Louisiana, and New Mexico and the device manufacturer.

Region IV received notification of this occurrence by facsimile from TBRC at 2:00 p.m. on February 14, 2001. Region IV has informed OEDO, IAT, NMSS, OSTP, and Region IV's SLO and PAO.

This information has been discussed with the State and is current as of 3:00 p.m. on February 14, 2001.
