Subject: Spent Fuel Pool Consequence Assessment

I just spoke with Diane Jackson. She said she received our spent fuel pool consequence assessment (SMSAB-99-02) today. She noted that our cover letter said that we would provide additional recommendations for the thermal hydraulic and consequence analysis by January 2000. She said that she is concerned that any recommendations we provide in January 2000 could impact their schedule which includes completing the spent fuel pool risk assessment by the end of November 1999. She also said she was considering asking her Branch Chief to call my Branch Chief to discuss this.
