Could check w/ AECI regarding temp escalation
due to oxidation in stream

I called AECI. (L. Dickson) at ~4:00 p.m. N

L. Dickson called back 1/25/00 @ 9:45 a.m. He said he does not really have any experience regarding Zircalloy oxidation in air, but he would ask a couple of people who might. I explained to him that we were looking for whether the autocatalytic oxidation might really get going in air at a temperature different from that in steam (1200°C). He said that he would call me if he found anything out regarding my question.
