

6/18/99

## May w/ NRR on SFP

Vonna:

NEI met w/ S Collins on 6/8/99. →

We will have Public Workshops w/ NEI.

Jason:

You might consider using RES for independent review.  
[Vonna responded that they are not interested in RES doing it.]

Jim O'Brien: Need to include insurance and security,  
besides EP.

R Barrett: The TWG did a great job [esp. Mchuk + O'Kelly]

This speaks well of NRR's capabilities

Main feedback from industry:

too long of a schedule

dragging up old issues that were already resolved.

We countered that a decommissioned reactor is

different than an operating reactor.

There are no plants now that are less than 1/2 yr

decommissioned

Industry may now come back saying we'll have

this in place for decommissioned plants. Industry

will proposed solutions

We may have to talk with industry regarding seismic

assumptions

R Barrett: Need acceptability requirements

1.174 Defense-in-depth

Margin

Low Damage Frequency

Large Early Release

Worlee: The consequences section of the report was  
stripped to get it out to NEI this week.

R Barrett: Can we reduce EP requirements?

After my, R Barrett said my consequences section was  
only stripped out temporarily, because it was not  
yet time for us to release this work to the public
