Comments: I personally do not want casks of spent nuclear waste diving on roads that I frequently use. . . and the multiple faults along the area of the propped Skull Valley site, Those faults have the ability to produce a 6.5 earthquake an from what I have heard the spent fuel will be in a Earthquake Proof structure but the casks will not be, what i heard was that they would be above ground with no anchor of any kind and in the case of an earthquake it is possible for those top crack and "meltdown" so to say i just DON'T want radioactive waste in my "backyard" so what i have to say is Utah "Is NOT the place" for nuclear waste
