John -

Per our discussion last week, I followed up with Bob Palla, who referred me to George Hubbard. Regarding Item #4 of the user need request (i.e., review of the final report on the technical study of SFP accident risk at decommissioning plants, review to be completed by October 2), apparently the final report is still being prepared, so the October 2 date is not possible. The user need refers to a Commission due date of October 31; I don't know if this will slip. Regardless, I'm assuming that we'll be asked for a fairly quick turnaround when the report is available.

George noted that a number of the final report discussions are unchanged from the draft I reviewed. He believes the key areas are TH and EP.
