

HIGHLIGHT

- * The Probabilistic Safety Assessment Branch has received from NEI an advanced copy of industry commitments to reduce the risk from spent fuel pools at decommissioning plants. The list is more exhaustive than the one discussed by NEI during the two day workshop on decommissioning risk in July 1999. Preliminary review of the list indicates that it appears to address most of the staff's concerns. We expect the NEI letter to be formally submitted shortly.
- * NEI has informed the Probabilistic Safety Assessment Branch that GPU does not intend to submit the Oyster Creek Decommissioning Risk Assessment, as requested by the staff in a letter to NEI. NEI did indicate that the risk assessment would be made available for NRC review at the Oyster Creek site. At this time SPSB intends to review the assessment at the site with help from its national laboratory contractor.
