

Technical Staff Working Group Mission Statement

"The technical staff will review and evaluate available technical information and methods which should be used as the risk-informed, technical basis for all follow up actions including rulemaking related to safeguards, indemnification, EP, and other issues and for reviewing any interim exemption requests.

This activity may also identify the need for follow up research or activities to address areas of large uncertainty."

The products after the two-month study will be:

- 1) technical bases for what we support now for ^{potential} rules
- 2) technical guidance for interim reviews
- 3) additional research required
