Subject: Decommission Task Group: Seismic Hazard Curves

From our 1993 hazard studies we had the entire probabilistic spectrum curve for return periods up to 10000 years and the SSE spectrum for mean and median estimates for Susquehanna and Pilgrim plants. Dr. Robert Rothman is the contact for all this and he has given me copies that I am holding until you get back. We also have the traditional PGA hazard curves with probabilities of exceedance, again for mean and median estimates for the Susquehanna and Pilgrim sites. Unfortunately, as you would expect, the curves are so asymptotic that you may need to get the numerical values and Bob can help.

Thank you,
Goutam Bagchi
