From Fred Vanderschmitz - National Research Corporation, Cambridge, regarding application Control No. 6282. See previous call 7-8-57. He inquired ~~xx~~ if the application had been received and if it would be possible for us to issue the license as soon as practicable. HHY was handling application and we had a draft of the letter ready for them in which we were asking the number of tritium sources to be obtained and the quantity in each. Also informed Mr. Vanderschmitz that they had not signed the application therefore we would have to return it. Promised to get this in the mail to him today.

He went on to explain that U.S. Radium Corp. will be the supplier of tritium-zirconium plaques which will be a sealed source used as a source of ionization in a pressure measuring gage. He also indicated that they plan to use 1 curie of tritium per source. Referred to HHY for follow-up.

15 sources Zr }
5 sources Tritium } 1 curie each
