Douglas J. Walters
SR. PROJECT MANAGER, LICENSING
NUCLEAR GENERATION

February 6, 2001

Mr. Christopher I. Grimes
Chief, License Renewal and Standardization Branch
Division of Regulatory Improvement Programs
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555-0001

SUBJECT: Categorization of Requests for Additional Information Associated with License
Renewal Application Reviews

PROJECT NUMBER: 690

Dear Mr. Grimes:

Two licensees undertook an effort to categorize the Requests for Additional Information (RAI) issued for their respective license renewal applications. The results are enclosed for NRC staff use and information. This information is being provided in the spirit of improving the license renewal review process. The categorization of RAIs is not intended to criticize any particular NRC staff reviewer or reviewers. It is feedback for the NRC and the industry to use constructively resulting in meaningful improvements in the way a renewal application is written and reviewed.

In an attempt to achieve some consistency, each RAI is placed into at least one of the following seven categories. A detailed discussion of each category is provided in the enclosure.

1. Appropriate RAI
2. Administrative Error in the LRA
3. Technical Error in the LRA
4. Information Provided in the LRA
5. Information Should Not be in the LRA
6. Challenges the Adequacy of the CLB
7. Technical Error in the RAI

We understand this categorization effort will be discussed in the February 13, 2001, License Renewal Steering Committee meeting. We look forward to hearing how the NRC staff plans to use the enclosed information.

Sincerely,

Douglas J. Walters

LICENSE RENEWAL CATEGORIZATION

The NRC requested feedback relative to the RAIs issued on the ANO – 1 and Hatch license renewal applications. The feedback will help NRC determine if changes should be made to the review process to make it more efficient. The industry will also use the information as a tool to make application preparation more efficient.

The approach taken was to bin each RAI into one of seven categories. The categories are as follows:

1. **Appropriate RAI** - This category includes RAIs that were appropriate and do not reflect problems with the LRA nor with the NRC review process.
2. **Administrative Error in the LRA** - This category includes RAIs that were the result of administrative errors or omissions by the applicant.
3. **Technical Error in the LRA** - This category includes RAIs that were the result of technical errors or omissions by the applicant.
4. **Information Provided in the LRA** - This category includes RAIs that were determined to be answered by information that was in the LRA or in the NRC reviewed references cited in the application.
5. **Information Should Not be in the LRA** - This category includes RAIs that request information that is not required or is not appropriate for an application.
6. **Challenges the Adequacy of the CLB** - This category includes RAIs that challenge the current licensing basis (CLB) without indicating a new concern for the extended period of operation.
7. **Technical Error in the RAI** - This category includes RAIs that were technically incorrect for the plant being reviewed, e.g., a PWR question asked of a BWR plant.

A single RAI generally includes more than one question. For purposes of the categorization effort, ANO assigned a line item for each question so if a particular RAI had three questions, there are three line items on the ANO table. ANO also provides references to the NRC letters transmitting the RAI and a reference to the Entergy letter to the NRC containing their response.

The Hatch data is presented in a table that provides one line item for each RAI. If the RAI had three questions, merely reading across the line item for that specific RAI will show the category for each question.
