Subject: Humboldt Bay decommissioned design basis

Humboldt Bay has a full spent fuel pool draindown as part of their design basis. It is based on an SFUEL calculation. I learned this a few weeks ago when they called to talk about the impact of an SFUEL input error and the partial draindown issue on their design basis.

Attached are goals which Tim has developed with regard to our TWG Report. Please review and be familiar with them so we are all on the same wavelength and headed in the same direction with regard to desired outcomes and outputs. Also, I have attached, FYI, an answer to Tim's question as to "what criteria has been used in past EP exemptions."

Let me or Tim know if you have any questions.
