George H. Ryan  
Governor

Thomas W. Ortciger  
Director

April 30, 2001

Mr. Paul Lohaus, Director  
Office of State and Tribal Programs  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555-0001

Dear Mr. Lohaus:

The purpose of this letter is to respond to your letter dated April 10, 2001, and the Draft Report of the Integrated Materials Performance Evaluation Program (IMPEP) Review of Illinois Agreement State Program, March 5-9, 2001. With one exception, we view the results of our recent IMPEP review positively. Ms. McLean is to be commended for her cooperative and constructive attitude, in addition to the professional effort expended by the entire IMPEP team. Unfortunately, NRC chose to go beyond its comments and recommendations offered at our exit meeting and included an additional "recommendation" that to us seems unnecessary, unsupported and unwarranted. We expect after serious consideration of our comments, appropriate changes to the final report will reflect a more reasoned program evaluation.

As you know, we take issue with the "recommendation" on Page 17 related to training. There was only a brief mention during the exit briefing with Department staff on March 8, and we do not recall its mention at the management exit meeting the following day. We presumed that NRC would have at that time identified all issues to which IDNS would be expected to respond. We are vexed by your inclusion of what appears to be an inconsequential comment on the topic of training that NRC surely recognizes as contentious.

A documented and detailed training program exists for IDNS materials license reviewers and the review team was aware it is our intent that a similar program be established prior to hiring of any new inspection staff. We are perplexed by what happened during the review team's preparation of the Draft Report to elevate this issue to a written recommendation. If the topic had been discussed during the IMPEP visit, we would have provided all the information attached to this letter, which clearly demonstrates the exhaustive training and refresher training that is provided to all of our staff on a regular basis. Notably, this has been accomplished in spite of NRC's failure to

Mr. Paul Lohaus, Director  
Page 2  
April 30, 2001

continue providing for essential training of agreement state personnel as it had prior to 1998. It seems moderately disingenuous for NRC to tell Agreement States to provide for their own training, while maintaining an apparently stringent critical view extending to even precisely what refresher training is necessary. Curiously, while fostering this policy, NRC has no compunction in shortchanging Agreement States in the training area.

As a recent demonstration, a useful training opportunity for refresher training was extended to our staff for NRC's H-304 Therapeutic Nuclear Medicine training course at NRC Regional Headquarters in Lisle, Illinois. We found this an opportunity to send all interested IDNS staff without incurring out-of-state travel expenses. However, at the last minute we were informed that Illinois could only have two slots for this valuable training! Alternatively, a videotape of the instruction will be provided for the remainder of our staff. This was disappointing as it was a unique opportunity for the apparently critical refresher training that your report alleges is lacking in our program. What is more frustrating is that we have provided training to NRC and other states on behalf of NRC concerning sealed source and device evaluations and related topics. We currently have additional training scheduled by members of our staff for NRC and states concerning sealed source and device evaluations and management of unwanted radioactive materials. It is now probably in our interest to defer any such training so that our staff has the time to obtain the specific refresher training that NRC seems to have in mind.

We surmise that the training recommendation was suddenly elevated in importance only because we do not have a procedure that includes the words "refresher training" for our staff. This seems contradictory to your letter of April 10, 2001, wherein you state, "All reviews use common criteria in the assessment and place primary emphasis on performance."(emphasis added). We are certain that any reasonable person reviewing the attached documented additional training received by our staff during the review period will readily conclude that the "refresher training" provided regularly to all staff is impressive, and exceeds that necessary to perform their functions.

Also, the recommendation refers to the NRC/OAS Training Working Group Report. Indeed, we are familiar with that report, Appendix D, which states in referring to Agreement State Training Policy, "Refresher training will be provided, as needed." This is exactly what we provide our staff. Again, performance should be used to assess this element, and no one seems able to point to staff performance issues that result from a lack of refresher training. It was not only incorrect but improper to include this recommendation in the draft report.

Mr. Paul Lohaus, Director

Page 3

April 30, 2001

Since volunteering to be one of the original states reviewed under this improved process, we have supported the notion of a fair, informed and cooperative review of both States and NRC Regions. Do not denigrate our mutual efforts by insisting on maintaining a recommendation that is unnecessary, unsupported and unwarranted. Insisting on maintaining this recommendation can only serve to seriously erode the positive and constructive nature of the IMPEP review.

The attachment to this letter presents specific comments and responses to the draft report for your consideration. We are looking forward to the Management Review Board meeting on May 21, 2001. We believe that after reflection on the matter you will agree that the training recommendation should be removed. If you have any questions regarding these comments, please contact Joe Klinger at (217)785-9930.

Sincerely,

A handwritten signature in black ink, appearing to read 'Thomas W. Ortziger', is written over the typed name and title.

Thomas W. Ortziger  
Director

Specific Comments on the Draft Report of the IMPEP Review  
Conducted March 5-9, 2001, of IDNS

1. First paragraph, 4th sentence of the April 10, 2001 letter transmitting the draft report, states, "The review team's recommendations were discussed with you ... review." There was no recommendation discussed regarding training concerns on the part of the IMPEP team.
2. Page 3, 2nd paragraph, 2nd sentence, states, " The Division's policy requires the findings to be dispatched within 30 days following the inspection." The first part of the sentence needs to be changed to, "The Division has a goal that the findings ...inspection."
3. Page 5, last two paragraphs: The penultimate paragraph acknowledges that a complete and updated written training program based on the NRC/Organization of Agreement States (OAS) Training Working Group Report was established for use by the materials license reviewer hired during the review period. The report continues, "The review team found the program acceptable for his training. The Division Director (should be changed to Division Chief) stated that a similar program would be created if a new inspector were hired." We have no problem with this paragraph, and we were informed by the IMPEP team that this satisfied any concerns about a documented training program for the Division. However, the first sentence in the last paragraph on page 5, states that, "One topic included in the NRC/OAS report that was lacking in the Division's training program was refresher training." The report then discusses the importance of refresher training and its advantages. We do not disagree with the importance and advantages of refresher training and we spend enormous resources to provide such training routinely. We have an extremely aggressive refresher training program as evidenced by the information contained in Appendix A. This is a listing of all the training accomplishments for our staff. We could have provided this information during the IMPEP visit if asked, but it was not. It astounds us that something that is barely mentioned during the IMPEP visit becomes one of two recommendations in the Draft IMPEP report. This is unacceptable and undermines the constructive efforts of the IMPEP review. Fortunately, the review team recommended that Illinois' performance with respect to the indicator, Technical Staffing and Training, was found to be satisfactory. Unfortunately, the recommendation concerning this item appears on page 17 in the Summary Section of the Draft Report as one of only two recommendations for the entire IMPEP review. This Recommendation should be deleted from the Report.

4. Page 8, 4th paragraph, 6th line: " The procedure details the responsibilities of the RDO, a rotating position within the Division ...response." The word "Division" should be changed to "Department" in this sentence.
5. Page 8, 5th paragraph, 1st sentence: Due to the Division not differentiating between incidents and allegations and the lack of an internal incident tracking system prior to 1999, the review team was unable to determine how many...Events." Prior to 1999, we had an internal tracking system that worked quite well. However, we finally succumbed to the desires of NRC and terminated use of our existing database and converted to sole use of the NMED program, even with all its nuances and inadequacies. If we had not done so we could have continued use of our system and readily provided the information necessary for review.
6. Page 9, penultimate sentence, 2nd paragraph, states, "The Department's procedures for handling incidents are incomplete in terms of handling "allegations." We do treat incidents the same and the sentence before the penultimate acknowledges that the Division took appropriate action on all allegations, including "responding to the allegeders when appropriate." Therefore, the performance of the Division was appropriate and satisfactory and, even though the procedure for incidents does not address all items concerning "allegations", the review team found this criteria satisfactory without any associated "recommendation." This is consistent with the performance-based approach of IMPEP and should have been used in the Technical Staff Training criteria.
7. Page 11, first bullet regarding "Radiological Criteria for License Termination": A sentence should be added that states, "The 25 mrem criteria is currently enforced through licensing and termination procedures." Because this requirement is enforced by the Division, by "other legally binding requirements," this item should not count as one of the four regulations referenced on Page 13 that have not been adopted within three-years of NRC rules and should be moved to Page 12 under the "compatible legally binding requirement" header.
8. Page 11, 2nd paragraph: We provided all the information concerning the Department's exemption process allowing release of patients administered radioactive material on a case-by-case basis. We suggest adding, "NRC will contact the state when its evaluation is completed." as the last sentence to this paragraph.
9. Page 17, Recommendation 1. at the bottom of the page: delete this recommendation!
