Subject: Draft Reg Guide 1.132 Rev 2 (DG-1101)

I have reviewed Draft Reg Guide 1.132, Rev. 2 (DG-1101) and have no objection to it, from a CRGR perspective. My compliments on a very readable product.

As we discussed, I would like to suggest a minor change to the first full paragraph of page 17, to link the need for a geologist at the site to the mapping, so licensees could not misinterpret the word " requires" as an NRC backfit:

"Consequently, mapping should be performed as the heading or opening is advanced and during the installation of support features, which necessitates ~~This requires~~ a well trained geologist, . . . at the excavation (~~at all times~~ during that work???)

Good luck in your retirement,
Bob Spence
