Ron-

I found a bunch of references in some of the Zirconium in the Nuclear Industry Proceedings. They are probably good enough for what I need. However, some of my colleagues and I have a few questions regarding the use of texture analysis for the qualification of cladding material used in commercial reactor fuel assemblies. Would you be able to answer questions on this subject? If so, could we schedule a teleconference call with you some time next week for a brief discussion? Thanks.

Kim

Thank you for the positive discussions we had at the Wednesday meeting. I am responding to let you know that I have received your request and will be looking up appropriate references for the subjects you are interested in. ( I suspect that ending a sentence with "in" is poor grammar but it gets the idea across ). There are many possible references and I will try to sort them to recommend the more appropriate non-proprietary papers.

Ron
