Attn: Bryan Parker

As a follow up to Dr. Anthony telephone conversation with you on this date, we wish to amend our license.

To provide for the ownership, possession and use of Gd-153 sources as attenuation correction devices for our Nuclear Medicine camera. We plan to use sources obtained from North American Scientific or isotopes laboratories as source model numbers. NAS: MED3601 or IPL:A3410 or equivalent. We anticipate that the activity per source will not exceed 300 millicuries. Since the attenuation device requires 2 sources, we request possession limit of 1 curie to allow for source exchange.

These sealed sources will either be exchanged every 6 months, or will have leak test preformed every 6 months.

We would appreciate your expedited review of this amendment request, in order that we may begin using this attenuation device as soon as possible.

Sincerely,

Nadeem G. Qazi, M.D.
Radiation Safety Officer
