Subject: MOX and the Roy Process.

NIRS: MOX alternative.

<http://members.home.net/theroyprocess>

With repeated treatments, the Roy Process will transmute plutonium into non-radioactive lead producing heat which can be used to make steam and power the existing electric generators at each nuclear power plant. All other nuclear waste elements can also be neutralized by the same method.

If the nuclear industry had rational vision, they would retool nuclear reactors to use nuclear waste as fuel to make steam....instead of the typical nuclear fuel rod pile.

The MOX proposal only adds more danger and expense and does nothing to eliminate nuclear waste.

Before Dr. Roy died, he told me "they will see someday...the Roy Process is the best way".

Regards,

Dennis F. Nester
