**Subject:** Nuclear Power

While researching the subject of nuclear power and waste management for my husband's Master's degree in Environmental Studies, our somewhat objective views were swayed dramatically against anything nuclear. The use of nuclear in the past has cost world contamination - that have not been publicized in the media for all to comprehend.

It is unbelievable to me that this great nation would venture on toward construction of a MOX fuel factory with no regard to looking at the history of the nuclear industry. The "no emission" fuel for power is the ONLY benefit - and if it is weighed against the safety and waste management problems that must be included in the equation, nuclear is a clear loser. It is wreckless to promote such an outdated and dangerous power source. With our creative and high-tech world of now, surely we cannot succumb to stepping backward.

If houses were built with photo-cell panels and solar along with wind power, I would be impressed as our nation could be proud going into the future.

I would like to see our country research other countries who have used more natural sources for energy as well.
