Subject: Ice Condenser Screw Memo

I showed the "screw memo" to engineering as we discussed. All I asked was if this record was a complete record and could it be retrieved. I was informed that McCormick could not remember ever seeing it & Koontz & Briggs could not recall it. However, the initials looked like Briggs and the signature appeared to be Koontz. The memo does not appear to exist in the PER file or their records system. I was told that it appeared "odd" because it had no date or RIMS number. However, the writing style did appear to be that of Sisson.

I am currently scheduled to be at Mcguire next week.
