

15. OCR ACCURACY

Text accuracy requirements are those that were circulated to the LSNARP membership in August 2000 that set forth an overall objective of 98.5% accuracy for participant document collections, subject to the following guidance:

- For non-OCRd documents, such as native word processing or HTML rendered directly from the authoring package, the target is 99.95% character accuracy.
- For OCRd documents, the target is 99.5% character accuracy, with a 98.5% character accuracy target for each individual page to ensure the overall consistency of each page.

The rationale of this guidance is provided in Appendix B.
