Subject: Beaver Valley Power Station, Unit No. 1 and No. 2
BV-1 Docket No. 50-334, License No. DPR-66
BV-2 Docket No. 50-412, License No. NPF-73
Supplement to License Amendment Request Nos. 286 and 158

This letter requests that the addition of a Bases Control Program to the Beaver Valley Power Station (BVPS) Technical Specifications proposed in License Amendment Request (LAR) 287 (BVPS Unit No. 1) and LAR 159 (BVPS Unit No. 2) be approved as a part of LAR No. 286 (BVPS Unit No. 1) and LAR No. 158 (BVPS Unit No. 2). LARs 287 and 159 were previously submitted by letter L-01-047 dated March 28, 2001, and supplemented by letter L-01-052 dated May 1, 2001. LARs 286 and 158 were previously submitted by letter L-00-143 dated December 27, 2000.

LARs 287 and 159 proposed changes to make the BVPS Technical Specifications more consistent with the standard Technical Specifications in NUREG-1431. This LAR is part of the BVPS conversion to the standard Technical Specifications. The changes proposed in this LAR included the relocation of Technical Specifications that did not meet the 10 CFR 50.36 criteria and the addition of a Bases Control Program.

LARs 286 and 159 proposed changes to the Reactor Trip System Instrumentation and Engineered Safety Feature Actuation System Instrumentation trip setpoints and allowable values. This LAR utilizes the Revised Thermal Design Procedure to generate additional Departure from Nucleate Boiling (DNB) margin to allow a revision to the core safety limits, DNB parameters and Overtemperature and Overpower ΔT trip setpoints and relocates certain requirements from the Technical Specifications to either the Core Operating Limits Report or Licensing Requirements Manual. This LAR also revises the associated Bases sections to reflect the proposed changes and includes other miscellaneous changes to the Technical Specifications and Bases sections.

This request is being made due to the recently identified need to have a Bases Control Program in order to support certain changes proposed in LARs 286 and 158. The addition of a Bases Control Program to the BVPS Technical Specifications is necessary to allow certain details contained in the current technical specifications to be relocated to the Technical Specification Bases section, as proposed in LARs 286 and 158. Therefore,

A001

Beaver Valley Power Station, Unit No. 1 and No. 2
Supplement to License Amendment Request Nos. 286 and 158
L-01-081
Page 2

BVPS is requesting that the addition of a Bases Control Program proposed in LARs 287 and 159 and as supplemented by letter L-01-052, be approved as part of LARs 286 and 158.

If there are any questions concerning this matter, please contact Mr. Thomas S. Cosgrove, Manager, Licensing at 724-682-5203.

Sincerely,

Lew W. Myers
