

Indian Point 2 (IP2) Steam Generator (SG) Tube Failure
Lessons-Learned Task Group
(TAC No. MA9163)

Task Group Notes - Discussion with Ashok Thadani, RES on 8/2/00

Task Group Attendees: Scott Newberry, Alan Rubin, Louise Lund, Joe Donoghue

Other RES Attendees: Tom King, Mike Mayfield

Discussion:

Scott Newberry gave an overview of the IP2 Lessons Learned Task Group's organization, objectives, scope of review, products, and schedule.

Ashok commented that the Surry SGTR in 1986 had similarities to the IP2 event and should be looked at. He also raised the possibility that when Con Edison replaces the generators, there could be an opportunity to look at the generators in more depth to see what could be learned. Tom King asked if the task group was looking at international experience. He was also interested in the role of risk in the staff's restart safety evaluation (SE). We told him that risk did not play a part of the restart SE, but was part of the significant determination process (SDP). The Task Group stressed the importance of getting relevant technical information from RES to NRR and the regions. Ashok seemed pleased with what the Task Group was doing.
