Subject: Re: SG inspection conference call

As I mentioned in my e-mail the folks from RIII and RIV who were on the call were not prepared to discuss the issues because the right people were not available. Bill Bateman will talk to them next week and tell them what RI and RII are doing.

>>> William Dean 09/13 7:01 AM >>>

Thanks for the feedback Sam. I think that is a good outcome. Were the other two regions represented and what was their position??

>>> Sampath Malur 09/12 4:46 PM >>>

No actions by IIPB as a result of the call.

Regions I and II will use Att.8 to perform SG tube ISI at PWR plants during the fall outage. R- I will do all plants; R-II will do 50% this year and 50% next year.

Appropriate people from R-III and R-IV were not in the call. Bateman will have conversations with them next week.

The only question asked of IIPB was whether we are revising the procedure (Att.8) to increase the hours. I told them that I have received only one feedback form and I had no plans to revise the procedure in the near future. Depending on IP-2 lessons-learned and additional regional inputs, we may then have to revise the procedure.
