Meeting to discuss multiple SG Action Plan Items

Date: Thursday, January 18, 2001
Time: 9:00 a.m.
Place: O-9B6

>>> Doug Coe 01/11 7:25 AM >>>

I'd like to discuss the broader range of topics with Ted. We need a very coordinated approach to the question of how the inspection program should be modified. This will be influenced by any new technical approach (e.g., guidance or standards) developed by your branch, any SG PIs initiated, and our (joint) decision regarding the need and form of an SDP for findings associated with RCPB degradation. It all needs to be coherent within the framework of the ROP. This coordination is needed to address the Lesson's Learned and IG reports. Either Tuesday or Thursday is good for me.

>>> Sampath Malur 01/09 9:53 AM >>>

We need to discuss the following SG plan items (other than SG PI) that are scheduled to be completed next month for which our branches have either lead or support responsibilities:

- Revisions to baseline inspection procedure 71111.08 and supplemental procedures 50002 and 73753. (Item 11; 5a, 5d)
- Guidance to inspectors on overseeing plants with known SG tube leakage (Item 9)
- Recommendations on scope and implementation of training on SG tube examination for inspectors (Item 11; 5b)
- Recommendations on steps to be taken to ensure that SG expertise is available to support licensing and inspection programs (Item 11; 5c)
- Establish risk-informed thresholds thru PIs or SDP for increased NRC attention (Item 7; 5f)

I suggest that we meet next week and work out the details.

Sam Malur
