

DRAFT OMB SUPPORTING STATEMENT FOR 10 CFR PART 36

"LICENSES AND RADIATION SAFETY REQUIREMENTS

FOR IRRADIATORS"

(3150-0158)

---

REVISION TO CLEARANCE EXTENSION

Description of the Information Collection

The Nuclear Regulatory Commission's regulations in 10 CFR Part 36 contain requirements for the issuance of a license authorizing the use of sealed sources containing radioactive materials in irradiators used to irradiate objects or materials for a variety of purposes in research, industry, and other fields. This part also contains the radiation safety requirements for operating irradiators. These regulations were issued pursuant to the Atomic Energy Act of 1954, as amended, and the Energy Reorganization Act of 1974, as amended.

The regulations in 10 CFR Part 36 (as described in Subpart A) apply to panoramic, dry-source-storage irradiators; underwater irradiators; and panoramic, wet-source-storage irradiators. They do not cover self-contained dry-source-storage irradiators, medical uses of sealed sources (such as teletherapy), or nondestructive testing (such as industrial radiography). The irradiators covered by this part have dose rates that exceed 5 grays (500 rads) per hour at 1 meter from the radioactive sealed sources in air or in water, as applicable for the irradiator type.

Subpart B of this part covers specific licensing requirements for obtaining a license or a license exemption. Subpart C lists the design and performance criteria for irradiators, including special requirements for sealed sources installed after, licenses issued after, and irradiator construction begun after July 1, 1993. Requirements for operating irradiators are covered in Subpart D. These include requirements for operator training, written operating and emergency procedures, personnel monitoring, radiation surveys, inspection, and maintenance. The records and reports required to ensure that the irradiator is being safely operated so that it poses no danger to the health and safety of the general public and the irradiator employees are listed in Subpart E.

A. Justification

1. Need for and Practical Utility of the Information Collection

The records that 10 CFR Part 36 requires the licensees to maintain will be used by NRC or Agreement State inspectors to evaluate compliance with NRC regulations to ensure that public health and safety are protected. The reports required by 10 CFR Part 36 will be used to alert NRC to any special problems that may be a threat to health and safety so that adequate protective actions can be taken.

The need for and practical utility of the specific information collection requirements of 10 CFR Part 36 are identified below.
