Dear Mr. Griffis:

Based on your request, we have investigated whether a "1 Phmart Corp. device containing 100 mCi of Cs137, model no. pg" might have been present at our facility. This is to advise you that, based on our investigation, this device is not presently in the General Electric Co. facility in Salem, Virginia and we do not believe a device of this type has been at our facility going back multiple years.

As a result of our internal inquiries, a comment made to us was that a product of this type was made by the Ohmart/Vega Corporation and at least one of these products was sold to Link Belt Company in Chicago, Illinois in June, 1963. This information, however, came from a GE employee located outside of Salem and is not related to any information relating to our Salem facility.

Separately, we have recently received and completed a request to fill out a form, NRC Form 664, "General Licensee Registration". On this form there were 2 devices listed by the NRC:

NRC Device Key 20932	Ohmart/Vega Corporation	model PG
NRC Device Key 203271	Ohmart/Vega Corporation	model PG

At this time, the GE Salem facility has no devices meeting registration/licensing requirements. A copy of the completed registration form for the GE Salem facility is being sent to the Director of Nuclear Materials Safety and Safeguards and is attached for your records.

Sincerely,

Jean G. Hogle
