NOTICE OF MOTION AND MOTION	1
MEMORANDUM OF POINTS AND AUTHORITIES	1
I. INTRODUCTION AND OVERVIEW	1
II. LEGAL ARGUMENT	5
A. Estimation Of Claims For Feasibility Purposes, In General.	5
B. The Statutory And Legal Bases For Estimating Claims For Feasibility Purposes.	7
C. The Claims Requiring Estimation In This Case Are In Any Event Predominantly "Contingent" Or "Unliquidated" And Therefore Must Be Estimated For Feasibility Purposes.	11
D. As To Claims Estimation-Related Matters As To Which The Debtor Suggests That It Retain An Expert, Section 327(a) Provides Authority For Such Retention.	14
E. Alternatively, The Court Can Appoint An Expert Pursuant To Federal Rule Of Evidence 706 For The Purpose Of Receiving And Evaluating Evidence And Advising The Court In Estimating The Aggregate Value Of Claims For Feasibility Purposes.	14
F. In The Alternative, The Court May Exercise Its Discretion Under Section 105(a) To Appoint An Assistant For Claims Estimation Purposes.	17
III. ENVIRONMENTAL CLAIMS	19
A. The Value Of Environmental Claims Against PG&E Is Vastly Overstated.	19
1. The State's Inflated Environmental Claims.	20
a. Many Other Financially Viable Parties, Including DTSC, Also Are Responsible Parties At The Casmalia Landfill, And PG&E's Share Of That Liability Is A Small Percentage Of The Amount The State Is Claiming.	20
b. PG&E Previously Settled All Its Obligations At The GBF/Pittsburgh Landfill, And Other Parties Are Performing The Cleanup There, Secured By A \$120 Million Insurance Policy.	23
c. The State's \$100 Million Claim For Substation Contamination Is Speculative And Contrary To Fact.	24

TABLE OF CONTENTS

		Page
2.	PG&E Already Has Settled Its Liabilities At A Number Of Sites Which The Claimants Include Within Their Respective Claims.	25
3.	Claimants Estimate Total Cost Rather Than Present Value.	25
4.	The Environmental Claims Filed By The Non-State Claimants Are Similarly Inflated.	26
B.	If The Environmental Claims Must Be Estimated On A Claim-By-Claim Basis, Utilization Of A Court-Appointed Expert To Assist Will Materially Streamline The Estimation Process.	27
C.	A Statistical Approach To Estimation Of Environmental Claims In The Aggregate, With The Assistance Of An Expert, Appears To Be A More Efficient Estimation Alternative.	30
IV.	GENERATOR CLAIMS	32
A.	Generator Claims Asserting PG&E Owes Sums Actually Owed By Southern California Edison.	32
B.	PX Cash Holdings.	33
C.	Claims For Electricity And Ancillary Services Provided On Or After 1/17/01.	33
D.	Generator Claims Should Be Reduced By At Least \$400 Million Because They Are Based On Prices FERC Has Determined Are Subject To Refund As Unjust And Unreasonable.	34
E.	The PX Claim Duplicating That Of The Generators.	34
F.	Underscheduling Penalty Claims.	35
V.	ENERGY SERVICE PROVIDER CLAIMS	35
VI.	COMMERCIAL CLAIMS	36
VII.	TORT CLAIMS	38
VIII.	EMPLOYMENT CLAIMS	42
	CONCLUSION	44

1 NOTICE OF MOTION AND MOTION

2 PLEASE TAKE NOTICE that on March 27, 2002, at 9:30 a.m., or as soon thereafter as
3 the matter may be heard, in the Courtroom of the Honorable Dennis Montali, located at 235 Pine
4 Street, 22nd Floor, San Francisco, California, Pacific Gas and Electric Company, the debtor and
5 debtor in possession in the above-captioned Chapter 11 case ("PG&E" or the "Debtor"), will and
6 hereby does move the Court (the "Motion") for order determining the process and procedures for
7 estimating, for purposes of determining the feasibility of the pending First Amended Plan of
8 Reorganization Under Chapter 11 of the Bankruptcy Code for Pacific Gas and Electric Company, as
9 amended (the "Plan"), jointly propounded by PG&E and its parent PG&E Corporation (the "Plan
10 Proponents"), those claims against the estate described in the accompanying Memorandum of Points
11 and Authorities incorporated by reference herein.

12 This Motion is made pursuant to Sections 1129(a)(11), 502(c) and 105(a) of the United
13 States Bankruptcy Code (11 U.S.C. §§1129(a)(11), 502(c) & 105(a)) and is based on the facts and
14 law set forth herein (including the accompanying Memorandum of Points and Authorities), the
15 Declaration of Iathan Annand filed concurrently herewith (hereinafter referred to as the "Annand
16 Declaration" and cited as the "Annand Decl."), the record of this case and any evidence presented at
17 or prior to the hearing on the Motion.

18 PLEASE TAKE FURTHER NOTICE that pursuant to Rule 9014-1(c)(2) of the
19 Bankruptcy Local Rules for the Northern District of California, any written opposition to the Motion
20 and the relief requested therein must be filed with the Bankruptcy Court and served upon
21 appropriate parties (including counsel for PG&E, the Office of the United States Trustee and the
22 Official Committee of Unsecured Creditors) at least five (5) days prior to the scheduled hearing
23 date. If there is no timely objection to the requested relief, the Court may enter an order granting
24 such relief without further hearing.

MEMORANDUM OF POINTS AND AUTHORITIES

I.

INTRODUCTION AND OVERVIEW¹

Many of the large claims filed in this case are grossly inflated. This is particularly the case with environmental, generator, energy service provider, tort and employment claims and certain commercial claims. PG&E intends to object to allowance of all or a portion of many of these claims, and the objection process has begun. However, were the Court to await final adjudication, liquidation and allowance or disallowance of these claims, it would materially retard the progress of the case and frustrate the reorganization effort. It is necessary and appropriate, therefore, for the Court to estimate these claims for the limited purpose of judging the feasibility of the Plan pursuant to Section 1129(a)(11) of the Bankruptcy Code,² and not for the purpose of adjudicating these claims or binding any claimholders to any resolution of their claims on the merits.

More specifically, approximately 13,000 proofs of claim ("POCs") have been filed in this case. Many are small, simple trade payables or are otherwise reasonably amenable to speedy liquidation (80% are for amounts less than \$100,000). However, a number of the claims are large, complex, and not necessarily readily subject to resolution. These include approximately 112 environmental claims covering hundreds of sites for a total of approximately \$1 billion, over 200 generator claims totaling about \$8.4 billion, approximately 50 claims filed by energy service providers totaling more than \$580 million, approximately nine commercial claims totaling over \$4 billion, approximately 1,250 chromium-related tort claims totaling approximately \$580 million, approximately 450 miscellaneous tort claims totaling more than \$315 million, and approximately 15 employment claims totaling over \$110 million (hereinafter collectively referred to as the "Claims"). As explained more fully in Parts III through VIII below, most of the Claims are for inflated

¹Unless specifically noted otherwise, the evidentiary basis for all facts set forth in this memorandum of points and authorities is contained in the Annand Declaration.

²Unless otherwise specified, all statutory references are to the United States Bankruptcy Code (title 11 of the United States Code), 11 U.S.C. §§101 et seq.

1 amounts, often for wildly inflated amounts, which in the aggregate constitute billions of dollars of
2 overstated Claims. Because such billions of dollars of overstated Claims may clearly affect the
3 feasibility of the Plan, under controlling Ninth Circuit authority these Claims must be estimated for
4 purposes of assessing the feasibility of the Plan. It bears emphasis that such estimation for
5 feasibility purposes has no binding or preclusive effect respecting the claims that are being
6 estimated, and therefore is in no way determinative of the allowed amount of such claims or the
7 distributions on such claims. Not surprisingly, then, the Court has substantial discretion and
8 flexibility in determining how best to proceed with claims estimation for feasibility purposes.

9 The challenge for the Court, the Debtor and parties in interest is to fashion a practicable
10 and reasonable process for estimating the Claims within a reasonable time frame. Estimation of the
11 Claims is likely to require substantial time and attention because of their volume, diversity and
12 complexity. If performed by the Court unassisted, the process could substantially burden the
13 Court's docket and interfere with the efficient administration of this case. Accordingly, the Court
14 will want to consider various means of streamlining the process. PG&E requests that the Court
15 consider the following suggested procedures and process for estimating the Claims, broken down by
16 type:

17 • Environmental Claims. Retention of a Court-approved expert to evaluate the
18 approximately 112 environmental Claims³ involving over 548 separate sites and totaling
19 approximately \$1 billion. The expert would report to the Court with a recommendation regarding
20 the estimated amount PG&E will reasonably need to address these Claims. The expert could be
21 empowered to determine in the first instance, subject to the Court's approval, the appropriate
22 procedures for accomplishing the estimation (e.g., statistical methodologies, nature of
23 recommendations to the Court). The expert should be highly experienced in the evaluation of
24 liability and damages for all types of statutory and common law environmental claims, impartial,
25

26 ³“Environmental claims” that PG&E proposes be subject to estimation include all
27 environmental claims for which timely POCs have been filed alleging pre-petition violations,
28 except, to the extent discussed in footnote 36 infra and its accompanying text, claims that do not
state or refer to any dollar amount.

1 and available to devote substantial time to the task over a relatively short period. Subject to the
2 Court's approval, PG&E proposes to file appropriate papers on or before April 17, 2002 for the
3 retention of such expert, coupled with a motion for the Court's estimation of such environmental
4 Claims for feasibility purposes at such time as the Court has the benefit of such expert's report.

5 • Commercial Claims. Retention of a Court-approved expert to evaluate approximately
6 nine commercial Claims⁴ totaling approximately \$4 billion, and report back to the Court with a
7 recommendation regarding the estimated amount PG&E will reasonably need to address them. The
8 expert could be empowered to determine in the first instance, subject to the Court's approval, the
9 appropriate procedures for accomplishing the estimation. Such expert should be highly experienced
10 in the evaluation of liability and damages for contract and other commercial claims, impartial, and
11 available. Subject to the Court's approval, PG&E proposes to file appropriate papers on or before
12 April 17, 2002 for the retention of such expert, coupled with a motion for the Court's estimation of
13 such commercial Claims for feasibility purposes at such time as the Court has the benefit of such
14 expert's report.

15 • Employment Claims. Retention of a Court-approved expert to evaluate approximately
16 15 employment Claims⁵ totaling about \$100 million and report back to the Court with a
17 recommendation regarding the estimated amount PG&E will reasonably need to address these
18 Claims. The expert could be empowered to determine in the first instance, subject to the Court's
19 approval, the appropriate procedures for accomplishing the estimation. Such expert should be
20 available, impartial, and highly experienced in the evaluation of liability and damages for all types
21 of statutory and common law employment claims. Subject to the Court's approval, PG&E proposes
22 to file appropriate papers on or before April 17, 2002 for the retention of such expert, coupled with a
23

24 ⁴"Commercial claims" that PG&E proposes be subject to estimation include all commercial
25 claims for which a timely POC in excess of \$5 million has been filed, with the exception of two
26 large claims aggregating \$9 billion (one filed by Baldwin Associates, Inc. and the other by Wayne
27 Roberts) that already have been disallowed by separate orders dated January 23, 2002 (docket nos.
28 4490, 4488).

⁵"Employment claims" that PG&E proposes be subject to estimation include approximately 15
claims by litigants alleging pre-petition employment law-related claims who have filed timely
POCs.

1 motion for the Court's estimation of such employment Claims for feasibility purposes at such time
2 as the Court has the benefit of such expert's report.

3 • Generator Claims. Estimation by the Court of several categories of generator Claims⁶
4 totaling over \$8 billion, based on written submissions. Subject to the Court's approval, PG&E
5 proposes to file one or more motions for estimation on or before April 17, 2002 for the estimation of
6 these Claims.

7 • Energy Service Provider Claims. Estimation by the Court of Energy Service Provider
8 ("ESP") Claims aggregating more than \$580 million. Subject to the Court's approval, PG&E
9 proposes to file a motion for the estimation of such Claims on or before April 17, 2002.

10 • SPI Commercial Claim. Estimation by the Court of one commercial Claim, asserted by
11 Sierra Pacific Industries ("SPI"), for more than \$1 billion, with which the Court is already familiar.
12 Subject to the Court's approval, PG&E proposes to file a motion on or before April 17, 2002 for the
13 estimation of this Claim.

14 • Tort Claims. Retention of a Court-approved expert to assist the Court in estimating, on
15 an aggregate basis, approximately 450 miscellaneous tort Claims totaling more than \$315 million,⁷
16 based on the application of statistical methodology to relevant litigation data accumulated by PG&E
17 over the last five years. PG&E also will ask the Court to estimate the reasonable aggregate value of
18 approximately 1,250 additional personal injury tort Claims, with an alleged value of approximately
19 \$580 million, that relate to alleged exposure to chromium from particular PG&E compressor
20 stations (the "Chromium Claims"). Subject to the Court's approval, PG&E proposes to file
21 appropriate papers on or before April 17, 2002 for the retention of the expert to be retained in
22

23 ⁶"Generator claims" that PG&E proposes be subject to estimation include all claims by
24 generators and related entities such as the PX and ISO which have filed timely POCs alleging
25 amounts owed pre-petition, except, to the extent discussed in footnote 36 infra and its accompanying
text, claims that do not state or refer to any dollar amount.

26 ⁷"Tort claims" that PG&E proposes be subject to estimation include all claims for personal
27 injury, wrongful death, and property damage by persons who have filed timely POCs alleging pre-
28 petition torts, except (i) claims for workers' compensation, (ii) those pre-litigation claims that PG&E
has assigned to its Safety, Health and Claims Department for resolution and that have been or are
anticipated to be fully resolved through this process, and (iii) to the extent discussed in footnote 36
infra and its accompanying text, those claims that do not state or refer to any dollar amount.

1 connection with valuation of the miscellaneous tort Claims, coupled with a motion for the Court's
2 estimation of such Claims for feasibility purposes at such time as the Court has the benefit of such
3 expert's analysis, as well as a motion for the Court's estimation of the Chromium Claims for
4 feasibility purposes.

5 PG&E addresses each of these categories of Claims requiring estimation in greater detail
6 in Parts III through VIII below. However, before proceeding with such fuller explanation of the
7 extent to which the Claims are overstated and why estimation of each category of Claims is
8 necessary, we turn first to the applicable legal principles.

10 II.

11 LEGAL ARGUMENT

12 A. Estimation Of Claims For Feasibility Purposes, In General.

13 Section 1129(a)(11) requires as a condition of confirmation of any plan of
14 reorganization that "[c]onfirmation of the plan is not likely to be followed by the liquidation, or the
15 need for further financial reorganization, of the debtor or any successor to the debtor under the
16 plan" In other words, a plan must be feasible and leave the reorganized entity financially stable
17 enough to be in a position to meet its obligations under the plan.

18 In this case, approximately 13,000 proofs of claim have been filed aggregating over \$44
19 billion.⁸ Tellingly, a very small percentage of these filed claims account for a huge percentage of
20 the total claimed amount, such that less than 10% of the aggregate number of filed claims account
21 for approximately 90% of the aggregate amount of filed claims. As noted above, PG&E maintains
22 that many of these large claims are materially overstated, to the tune of billions of dollars in the
23 aggregate. Accordingly, in order to determine whether the Plan is feasible, the Court can and must

24
25 ⁸This \$44 billion figure includes approximately \$9 billion of claims that already have been
26 disallowed. See footnote 4, *supra*. In addition, PG&E is in the process of filing objections to
27 various facially duplicative claims (PG&E already has filed two omnibus objections covering
28 numerous duplicative claims and intends to file one or more additional omnibus objections to other
existing aggregate claims).

1 estimate the Claims for feasibility purposes under Section 1129(a)(11). Pizza of Hawaii, Inc. v.
2 Shakey's, Inc. (In re Pizza of Hawaii, Inc.), 761 F.2d 1374, 1382 (9th Cir. 1985) (bankruptcy court
3 erred by finding the debtor's Chapter 11 plan feasible without estimating the value of a potentially
4 large civil suit for damages against the estate).

5 As a lesser-included proposition, courts also have recognized that estimation of claims
6 for feasibility purposes promotes the objectives of Chapter 11 reorganization, and that freezing the
7 plan process pending the final allowance or disallowance of claims would be antithetical to the
8 reorganization process. See Interco, Inc. v. Ilgwa Nat'l Ret. Fund (In re Interco, Inc.), 137 B.R. 993,
9 998 (Bankr. E.D. Miss. 1992) (claim liquidation would adversely affect debtor's ability to formulate
10 and implement a plan of reorganization and frustrate the reorganization case); In re Nova Real
11 Estate Inv. Trust, 23 B.R. 62, 65 (Bankr. E.D. Va. 1982) (same).

12 In the estimation proceeding, the bankruptcy court need only obtain a "rough estimate"
13 of the value of the claims requiring estimation. In re Thomson McKinnon Sec., Inc., 191 B.R. 976,
14 989 (Bankr. S.D.N.Y. 1996). Further, the court has broad discretion in choosing the estimation
15 process(es). Brutoco Eng'g & Constr. Co. v. Dennis Ponte, Inc. (In re Dennis Ponte, Inc.), 61 B.R.
16 296, 299 (B.A.P. 9th Cir. 1986) (citing with approval in the context of estimating a claim for
17 feasibility purposes the directive in Bittner v. Borne Chem. Co., 691 F.2d 134, 135 (3d Cir. 1982), to
18 "us[e] whatever method is best suited to the particular contingencies at issue"); Corey v. Louis (In re
19 Corey), 892 F.2d 829, 834 (9th Cir. 1989) ("court has broad discretion when estimating the value of
20 an unliquidated claim"). Non-bankruptcy law applicable to particular claims is binding, e.g., a claim
21 based on a contract is governed by the contract and by legal principles applicable to that contract.
22 Bittner, 691 F.2d at 135. Discretion is otherwise virtually unfettered.

23 Given that both Section 1129(a)(11) and controlling Ninth Circuit authority mandate the
24 estimation of claims where necessary to determine whether a plan or reorganization is feasible, it is
25 not surprising that bankruptcy courts have considerable discretion in choosing the means and
26 methods of estimation, in order to complete the estimation process as promptly and efficiently as
27 possible for feasibility purposes. This is because estimation of a claim for feasibility purposes does
28 not in any way affect or bind the claimholder regarding the ultimate allowance of the claim or the

1 distribution the claimholder will be entitled to receive thereon. Rather, it is merely a rough estimate
2 for the limited purpose of determining whether a plan of reorganization meets the feasibility
3 requirement. And if bankruptcy courts did not have broad authority to estimate claims for feasibility
4 purposes, virtually any recalcitrant creditor or group of creditors could bring the plan process to a
5 standstill by asserting large and factually complex claims that they claim are merely "disputed,"
6 insisting that the plan feasibility requirement could not be applied or satisfied until after the
7 conclusion of evidentiary hearings resulting in the allowance or disallowance of the claim. This
8 paralysis of the Chapter 11 process is neither contemplated nor countenanced by the Bankruptcy
9 Code.

10 B. The Statutory And Legal Bases For Estimating Claims For Feasibility Purposes.

11 Although courts draw loosely upon Section 502(c) as authority for estimating claims for
12 feasibility purposes, this section applies by its terms only to estimation for allowance purposes.⁹
13 The differences in the goals and impact of estimation for allowance purposes, on the one hand, and
14 feasibility purposes, on the other, dictates against strict application of Section 502(c) requirements to
15 feasibility estimation. In particular, both logic and case law demonstrate that courts can and should
16 estimate any disputed claims for plan feasibility purposes if the alleged value of those claims may
17 affect the feasibility of a plan of reorganization.

18 As necessary background, it is important to keep in mind that there are a variety of
19 circumstances under which a bankruptcy court may be required to estimate claims during the course
20 of a Chapter 11 case. Section 502(c), as already noted, provides for estimation of claims for the
21 purpose of the allowance of claims. The ramifications of a bankruptcy court's estimation of the
22 value of claims for this purpose is dramatic. Absent reconsideration for cause pursuant to Section
23

24 ⁹Section 502(c) states in full:

25 There shall be estimated for purpose of allowance under this section—

- 26 (1) any contingent or unliquidated claim, the fixing or liquidation of which, as the
27 case may be, would unduly delay the administration of the case; or
28 (2) any right to payment arising from a right to an equitable remedy for breach of
performance.

11 U.S.C. §502(c).

502(j), the claim is allowed in the estimated amount, the claimant will be entitled to distributions only up to the amount estimated by the bankruptcy court, and the claim will otherwise be discharged under Section 1141(d) upon confirmation of a plan.¹⁰ Similarly, the court may estimate claims pursuant to Rule 3018 of the Federal Rules of Bankruptcy Procedure for purposes of determining voting rights.¹¹ Creditors' interests are directly affected in this context as well, since disallowance or underestimation of a claim reduces or eliminates any ability the claimant may otherwise have had to affect the approval of a plan of reorganization.

A feasibility determination, in contrast, is a preliminary examination that does not directly affect any particular creditor's rights. Rather, the feasibility test is designed merely to "prevent confirmation of visionary schemes which promise creditors and equity security holders more under a proposed plan than the debtor can possibly attain after confirmation." In re Pizza of Hawaii, 761 F.2d at 1382 (quoting 5 Lawrence P. King Collier on Bankruptcy ¶1129.02[11] at 1129-34 (15th ed. 1984)). Courts have repeatedly held that "the feasibility standard is whether the plan offers a reasonable assurance of success. Success need not be guaranteed." Kane v. Johns-Manville Corp., 843 F.2d 636, 649 (2d Cir. 1988) (emphasis added). Consequently, estimation serves a different goal for feasibility purposes than for allowance or even voting purposes.

¹⁰This important distinction between the purposes for seeking estimation is highlighted by In re Dow Corning Corp., 211 B.R. 545 (Bankr. E.D. Mich. 1997). There, estimation of mass tort claims was sought for a number of purposes, including purportedly for plan feasibility purposes under Section 1129(a)(11). However, the court, in analyzing the plan, correctly noted that the proposed plan in that case was not a full payment plan, but rather provided that the reorganized debtor would set aside a specified dollar amount that the debtor anticipated would be sufficient to pay all claims in full, but that limited recovery to a pro rata share of the set-aside funds if such funds proved insufficient to pay all claims in full. Id. at 568. Thus the court properly concluded that "estimation is not necessary for plan confirmation purposes" because "[t]he Reorganized Debtor's ability to pay tort claims in full would simply not be an issue under §1129(a)(11) for no matter how large the actual aggregate tort liability may turn out to be, the Reorganized Debtor would clearly be able to perform the pertinent terms of the plan. If the Court estimated the aggregate claims at something within the \$2 billion [to be set aside under the plan], the plan would be feasible. If the Court estimated the claims at an amount far in excess of \$2 billion, the plan would still be feasible, because the Reorganized Debtor's obligation is capped by the plan at \$2 billion, and the Debtor has \$2 billion." Id. at 568-69. In the PG&E case, by contrast, the Plan does provide for full payment and there is no artificial cap, and it therefore is necessary to obtain a realistic estimate of the overstated Claims in order for the Court to apply Section 1129(a)(11)'s feasibility test.

¹¹Bankruptcy Rule 3018(a) states, in relevant part, that "[n]otwithstanding objection to a claim or interest, the court after notice and hearing may temporarily allow the claim or interest in an amount which the court deems proper for the purpose of accepting or rejecting the plan."

1 There is no particular Bankruptcy Code provision or rule that directly addresses the
2 bankruptcy court's power to estimate claims for feasibility purposes. Nevertheless, it is clear that a
3 bankruptcy court must take into account pending lawsuits and other claims in making its feasibility
4 determination if such claims could compromise the ability of the debtor to reorganize. In re Pizza of
5 Hawaii, 761 F.2d at 1382; In re Dennis Ponte, Inc., 61 B.R. at 299. Estimation of the value of large
6 claims, in other words, has been found to be inherent in the process of determining whether the
7 debtor's reorganization plan enjoys a reasonable prospect of success and therefore is feasible.

8 While some courts have cited generally to Section 502(c) as authority for the estimation
9 of claims for feasibility purposes, it is clear that the Section 502(c) standard is not strictly applied in
10 this context. Thus, although Section 502(c) specifically authorizes estimation of only "contingent"
11 or "unliquidated" claims for allowance purposes, a feasibility determination can require the
12 estimation of any sort of disputed claims. In Pizza of Hawaii, for example, Shakey's, a national
13 franchisor of fast food outlets, entered into a dealer agreement with three individuals. Shakey's filed
14 a suit in district court against the individuals for breach of contract and trademark infringement. Id.,
15 761 F.2d at 1375. Shortly thereafter, the individuals assigned their interest in the dealer agreement
16 to Pizza of Hawaii, which filed a Chapter 11 petition the following day. Id. Pizza of Hawaii was
17 granted leave to intervene in this lawsuit after Shakey's amended its complaint to allege violations
18 of its contractual and trademark rights by Pizza of Hawaii itself. Id. at 1375. Shakey's complaint
19 requested \$58,335.23 in unpaid dealer fees, but did not quantify the damages for its unfair
20 competition and trademark infringement claims. Id. at 1381. The Ninth Circuit held that "[u]ntil the
21 bankruptcy court has estimated the value of Shakey's claim, it is impossible to determine whether
22 \$291,295.99 is sufficient to effectuate the plan and enable Pizza to continue in business." Id. at
23 1382. Significantly, the Ninth Circuit did not limit estimation to the unquantified or non-contractual
24 claims of the complaint, nor did it discuss whether any portion of the claim was either contingent or
25 unliquidated.

26 Similarly, in In re Nova Real Estate Investment Trust, 23 B.R. 62, the court estimated
27 disputed contract-based claims for purposes of making a feasibility determination. In that case,
28 Nova loaned money to the claimant for the purpose of purchasing land and building a condominium.

1 The claimant defaulted on the loans, and conveyed the land and the nearly completed building to
2 Nova. Three years later, the claimant filed suit against Nova in state court based on these contracts.
3 Id. at 64. Nova filed a petition for reorganization under Chapter 11 two years later, while the suit
4 was still pending in state court. The claimant asserted that his claims totaled \$12 million. Id. The
5 court nevertheless estimated the claims for feasibility purposes, loosely deeming them to be
6 “unliquidated” and noting that “[s]imply allowing the claim in full as stated by [the claimant] . . .
7 could have jeopardized the feasibility of the debtor’s plan.” Id. at 65. Rather than allow the
8 claimant to unilaterally block confirmation of the plan, the court estimated all of the claimant’s
9 causes of action—even those based purely on alleged nonpayment pursuant to the terms of the
10 contracts at issue in that case. Id.

11 Thus, a bankruptcy court has the authority to estimate any disputed claim for feasibility
12 purposes if the purported value of such disputed claim could reasonably affect the success of the
13 reorganization plan. In doing so, the court need not determine that the claim is either “contingent,”
14 or “unliquidated,” as those terms are defined by the courts for other purposes. If such authority does
15 not exist squarely under Section 502(c), then it in any event surely exists under Section 1129(a)(11)
16 itself, since feasibility determinations necessarily require the evaluation of any factor that might
17 reasonably be expected to materially affect the success of a reorganization plan, including the
18 existence of large outstanding disputed claims. Additionally, Section 105(a) of the Bankruptcy
19 Code authorizes the bankruptcy court to “issue any order, process, or judgment that is necessary or
20 appropriate to carry out the provisions of this title.” The purpose of Section 105 is “to assure the
21 bankruptcy courts power to take whatever action is appropriate or necessary in aid of the exercise of
22 their jurisdiction.” 2 Lawrence P. King Collier on Bankruptcy ¶105.01 at 105-6 (15th ed. rev.
23 2000). Accordingly, Section 105(a) of the Bankruptcy Code also provides this Court with authority
24 to estimate the Claims for feasibility purposes in order to carry out the provisions of Section
25 1129(a)(11).

1 C. The Claims Requiring Estimation In This Case Are In Any Event Predominantly
2 "Contingent" Or "Unliquidated" And Therefore Must Be Estimated For Feasibility
3 Purposes.

4 Even assuming arguendo that Section 502(c) was the sole basis for the bankruptcy
5 court's authority to estimate claims for feasibility purposes and that Section 502(c) applies only to
6 "contingent" or "unliquidated" claims even in the feasibility determination context, the Claims that
7 PG&E seeks to have estimated in any event qualify as "contingent" or "unliquidated" claims under
8 applicable case law.

9 The Bankruptcy Code does not define the terms "contingent" or "unliquidated." In
10 general, the courts have determined that "if all events giving rise to liability occurred prior to the
11 filing of the bankruptcy petition, the claim is not contingent." Audre, Inc. v. Casey (In re Audre,
12 Inc.), 216 B.R. 19, 30 (B.A.P. 9th Cir. 1997). In addition, "whether a debt is liquidated or not . . .
13 does not depend strictly on whether the claim sounds in tort or in contract, but whether it is capable
14 of ready computation." Id. (quoting In re Loya, 123 B.R. 338, 340 (B.A.P. 9th Cir. 1991)
15 (construing Section 109(e) to determine eligibility for relief under Chapter 13)).

16 Most of the bankruptcy case law construing the meaning of the term "unliquidated"
17 analyzes Section 109(e), which governs eligibility for relief under Chapter 13.¹² The Ninth Circuit
18 has held in this context that a dispute as to liability may render a debt "unliquidated," depending on
19 whether resolution of the dispute would require more than a preliminary hearing. In Federal Deposit
20 Ins. Corp. v. Wenberg (In re Wenberg), 94 B.R. 631 (B.A.P. 9th Cir. 1988), aff'd, 902 F.2d 768 (9th
21 Cir. 1990), for example, the Ninth Circuit Bankruptcy Appellate Panel examined whether
22 accounting and attorney fees imposed as part of a prepetition judgment constituted "liquidated"
23 debts for purposes of Section 109(e). In doing so, the court noted that "the question whether a debt

24 ¹²Section 109(e) provides:

25 Only an individual with regular income that owes, on the date of the filing of the
26 petition, noncontingent, liquidated, unsecured debts of less than \$290,525 and
27 noncontingent, liquidated, secured debts of less than \$871,550, or an individual with
28 regular income and such individual's spouse, except a stockbroker or a commodity
broker, that owe, on the date of the filing of the petition, noncontingent, liquidated,
unsecured debts that aggregate less than \$290,525 and noncontingent, liquidated,
secured debts of less than \$871,550 may be a debtor under Chapter 13 of this title.

11 U.S.C. §109(e).

1 is liquidated 'turns on whether it is subject to ready determination and precision in computation of
2 the amount due.'" Id. at 634 (quoting Fostvedt v. Dow (In re Fostvedt), 823 F.2d 305, 306 (9th Cir.
3 1987)). The Wenberg court went on to explain that:

4 The definition of "ready determination" turns on the distinction between a
5 simple hearing to determine the amount of a certain debt, and an extensive
6 and contested evidentiary hearing in which substantial evidence may be
 necessary to establish amounts or liability. (Wenberg, 94 B.R. at 634
 (emphasis added))

7 In other words, a dispute as to liability may render a claim unliquidated.

8 Similarly, in Nicholes v. Johnny Appleseed of Washington (In re Nicholes), 184 B.R. 82
9 (B.A.P. 9th Cir. 1995), the Ninth Circuit Bankruptcy Appellate Panel reviewed a bankruptcy court
10 determination that the debtor was ineligible for Chapter 13 relief under Section 109(e) due to
11 excessive contingent and/or liquidated debts. The debtor argued that certain debts that the
12 bankruptcy court had determined to be noncontingent were in fact contingent and/or unliquidated
13 because they were earned in the name of his company.

14 The Nicholes court first noted that Section 109(e) "excludes unliquidated or contingent
15 debts from the Chapter 13 eligibility computation, but does not exclude debts which are merely
16 disputed." Id. at 88. Although the court noted that "the terms disputed, contingent and liquidated
17 have different meanings," the court held that a dispute could, under certain circumstances, render a
18 debt unliquidated. Id.

19 The Nicholes court noted that "[a] debt is liquidated if it is capable of 'ready
20 determination and precision in computation of the amount due.'" Id. at 89. The test for this "ready
21 determination" is "whether the amount due is fixed or certain or otherwise ascertainable by
22 reference to an agreement or by a simple computation." Id. It further noted that "the term
23 'disputed' is broad and can encompass either liquidated or unliquidated debts." Id. In other words,
24 "it is the nature of the dispute, and not the existence of the dispute, that makes a claim unliquidated."
25 Id. at 90.

26 The Nicholes court specifically examined divergent lines of cases discussing whether a
27 dispute as to liability alone could render a debt unliquidated. It followed Wenberg in holding that
28 "if the dispute itself makes the claim difficult to ascertain or prevents the ready determination of the

1 amount due, the debt is unliquidated” Nicholes, 184 B.R. at 91.

2 Further, beyond these Ninth Circuit cases, courts throughout the country have shown a
3 flexible approach to determining what disputed claims qualify as “contingent” or “unliquidated.”
4 Thus, in In re Windsor Plumbing Supply Co., 170 B.R. 503 (Bankr. E.D. N.Y. 1994), one part of the
5 claim was for a fixed amount allegedly due under invoices for merchandise shipped to the debtor,
6 and the second component of the claim was for treble damages under RICO. In estimating the entire
7 claim for voting purposes (which presumably employs a stricter standard than for feasibility
8 purposes because of the more pronounced effect on the claimholder), the court stated “[w]hile the
9 magnitude of the plaintiff’s loss may be fixed, liquidated and undisputed, the extent, if any, to which
10 The Debtors caused such loss or otherwise may be liable therefore clearly is not.” Id. at 521. In
11 other words, the court treated the claim as unliquidated because the debtor contested liability, not the
12 amount of the claimant’s loss. See also Bunn v. Frontier Airlines, Inc. (In re Frontier Airlines, Inc.),
13 137 B.R. 811 (Bankr. D. Colo. 1992) (court estimated for allowance purposes under Section 502(c)
14 various employee claims for wages and benefits, even though claims were contract-based and
15 appeared readily calculable from collective bargaining or other employment agreements); In re
16 Interco, Inc., 137 B.R. at 993 (over claimant’s objection, court estimated for feasibility purposes
17 under Section 502(c) a retirement fund’s claim for withdrawal liability under ERISA, holding that
18 claim was unliquidated even though ERISA set forth formulae for calculating such liability, noting
19 that the debtor intended to challenge the actuarial assumptions upon which the fund’s computation
20 was based).

21 The Claims that PG&E seeks to have the Court estimate are virtually all properly
22 considered either “unliquidated” or “contingent.” Most of the Claims—such as the environmental
23 Claims and the tort Claims—fall within even the strictest definition of these terms. Others, such as
24 the generator Claims, while based on contracts or tariffs, fall well within the case law concepts of
25 “unliquidated” because they involve complex factual matters and calculations, and resolution of the
26 disputes requires more than a cursory examination. Indeed, the bulk of the generator Claims can not
27 be “liquidated” until final actions on matters pending at FERC.

28 In short, while there is and should be no requirement that large disputed claims be

1 strictly "unliquidated" or "contingent" to qualify for estimation for feasibility purposes under one or
2 more of Section 1129(a)(11), Section 105(a) or Section 502(c), even if one accepted the proposition
3 that this Court only has authority to estimate "unliquidated" or "contingent" claims for feasibility
4 purposes, there is ample authority for determining that the Claims here at issue are "unliquidated" or
5 "contingent" and therefore can and should be estimated by the Court.

6 D. As To Claims Estimation-Related Matters As To Which The Debtor Suggests That It
7 Retain An Expert, Section 327(a) Provides Authority For Such Retention.

8 Section 327(a) authorizes a debtor in possession, with Bankruptcy Court approval, to
9 employ one or more "appraisers, auctioneers, or other professional persons, that do not hold or
10 represent an interest adverse to the estate, and that are disinterested persons, to represent or assist the
11 [debtor in possession] in carrying out the [debtor in possession's] duties under this title. 11 U.S.C.
12 §§327(a); 1107(a). In a Chapter 11 case, propounding and seeking confirmation of a plan of
13 reorganization is one of the principal responsibilities and the ultimate goal of a debtor in possession.
14 Thus, a debtor in possession's requested retention of experts for purposes of developing evidence to
15 assist in any required estimation process under Section 1129(a)(11) appears to be well within the
16 ambit of Section 327(a). PG&E proposes that it submit to the Court a list of proposed experts in the
17 various relevant subject areas (including a detailed curriculum vitae of each such proposed expert)
18 along with its applications for retention of such experts, and that the form of order(s) appointing the
19 experts shall expressly charge and instruct the experts to be impartial in reviewing and analyzing
20 relevant data and formulating recommendations as to estimated values of Claims. Accordingly,
21 PG&E, with the Court's approval following the hearing on this Motion, will move for appointment
22 of experts to assist in those estimations that PG&E has indicated would most efficiently be aided by
23 an expert's analysis and recommendations.

24 E. Alternatively, The Court Can Appoint An Expert Pursuant To Federal Rule of
25 Evidence 706 For The Purpose Of Receiving And Evaluating Evidence And Advising
26 The Court In Estimating The Aggregate Value Of Claims For Feasibility Purposes.

27 As indicated in the foregoing paragraph, PG&E believes that the most efficient and
28 expeditious way of enlisting expert assistance in the claims estimation process would be for PG&E
to retain experts with Court approval pursuant to Section 327(a) of the Bankruptcy Code.

1 Nonetheless, if for any reason the Court believes that this is not the most salutary route to obtaining
2 expert assistance in the claims estimation process, there are other statutory and rule bases for the
3 appointment of experts to assist the Court. Most prominently, there is express authority for the
4 Court to appoint its own expert under the Federal Rules of Evidence, which apply to cases under the
5 Bankruptcy Code. See Fed. R. Bankr. P. 9017.

6 More particularly, Rule 706 of the Federal Rules of Evidence states:

7 The court may on its own motion or on the motion of any party enter an
8 order to show cause why expert witnesses should not be appointed, and may
9 request the parties to submit nominations. The court may appoint any expert
witnesses agreed upon by the parties, and may appoint expert witnesses of
its own selection. (Fed. R. Evid. 706(a))

10 Even before the adoption of Rule 706 of the Federal Rules of Evidence, the importance
11 and historical role of court-appointed experts was recognized. In re Joint E. & S. Dist. Asbestos
12 Litig. (In re Johns-Manville Corp.), 830 F. Supp. 686, 692 (E.D.N.Y. & S.D.N.Y. 1993) (citing
13 Scott v. Spanjer Bros., Inc. 298 F.2d 928, 930 (2d Cir. 1962) (“[a]ppellate courts no longer question
14 the inherent power of a trial court to appoint an expert under proper circumstances, to aid it in the
15 just disposition of a case [t]he appointment of an impartial . . . expert by the court in the
16 exercise of its sound discretion is an equitable and forward-looking technique for promoting the fair
17 trial of a lawsuit”).

18 Although the appointment of court-appointed expert assistance under Rule 706 is not
19 commonplace, the power is well recognized, and it is an important tool for dealing with “some of
20 the most demanding evidentiary issues that arise in federal courts.” 830 F. Supp. at 693 (citing
21 Joe S. Cecil & Thomas E. Willging, Court-Appointed Experts: Defining the Role of Experts
22 Appointed Under Federal Rule of Evidence 706 4-5 (Fed. Jud. Center 1993)). Judge Weinstein
23 listed several factors which, “alone and in combination,” justified the appointment of such experts in
24 connection with a bankruptcy case: the questions are “complex and riven with uncertainties and
25 interdependent variables”; the number of people affected is large; the courts “cannot proceed toward
26 a just and equitable result without some reasonably firm data”; and “all parties have strong and
27 conflicting interest in the character of that data.” Id. The court further noted its obligations to
28 oversee a complex bankruptcy reorganization, which “cannot be met without the oversight court

1 having a solid grounding in fact.” Id. (citing In re Joint E. & S. Dist. Asbestos Litig. (In re Johns-
2 Manville Corp.), 982 F.2d 721, 750 (2d Cir. 1992)).

3 The Johns-Manville litigation presents a good example of the use of an expert appointed
4 under Rule 706 in a claims-related context. There, a class action suit was brought by beneficiaries
5 of an insolvent bankruptcy trust, which sought to establish an equitable distribution of the trust res.
6 The district court judge (overseeing the bankruptcy plan’s implementation jointly with the
7 bankruptcy court) appointed an expert to advise the court pursuant to Rule 706. See Johns-Manville
8 Corp., 982 F.2d at 728-30. “Among the tasks assigned to [the expert] were reporting to the [c]ourt
9 on the feasibility of providing accurate estimates of future claims upon the Trust” Id. at 731.
10 The district court had recognized that a major issue in the administration of the trust would be the
11 proper allocation of the proceeds between payment of current claims and maintenance of a reserve
12 for future claims. See id. “Critical to that allocation would be estimates of the number of future
13 claimants.” Id.

14 When the parties objected to the court’s adoption of the expert’s interim Rule 706
15 report, the court responded, wholly apart from the class action portion of the case, “we have no
16 doubt of the Court’s authority to exercise its bankruptcy court powers to appoint experts to advise it
17 on matters that concern the ongoing administration of the Chapter 11 proceeding.” Id. at 750. The
18 court ruled that the appointment of such an expert was not “in conflict with the mechanism
19 contemplated by the [class action settlement] for estimation of future claims” and that the trust
20 beneficiaries “lack the power to impair the authority of the Bankruptcy Court to exercise its retained
21 powers under the Plan to implement the Plan.” Id. Further, the court expressed “no doubt that the
22 role of the experts is within the broad authority of Rule 706.” Id. (citing Scott, 298 F.2d at 930).

23 Another case considering the use of Rule 706 experts in the claims estimation process is
24 In re Dow Corning Corp., 211 B.R. at 554. There, the debtor had moved for the appointment of a
25 panel of experts to estimate mass tort claims for a variety of purposes. The court denied the motion
26 for estimation because estimation was not necessary or appropriate for feasibility purposes since the
27 plan was feasible on its face insofar as the debtor’s ability to discharge its obligations under the plan
28 was concerned. Id. at 568-69; see also footnote 10, supra, for a more detailed explanation of the

1 holding. As a lesser-included proposition, the court also declined to appoint a panel of experts,
2 since no estimation was necessary. Id. at 590-91. However, at the same time, the court noted the
3 bankruptcy court's power to appoint its own expert witness under Rule 706 of the Federal Rules of
4 Evidence. Id. at 591.¹³

5 In light of the complex issues attendant to the claims estimation process and the broad
6 authority conferred under Rule 706, this Court can and should proceed with the appointment of one
7 or more experts under Rule 706 if the Court for any reason is not comfortable authorizing PG&E to
8 retain an expert pursuant to Section 327(a). One way or another, the use of experts is a sensible
9 approach to moving forward with and timely concluding the claims estimation process without
10 causing an undue burden on the Court.

11 F. In The Alternative, The Court May Exercise Its Discretion Under Section 105(a) To
12 Appoint An Assistant For Claims Estimation Purposes.

13 Section 105(a) confers on bankruptcy courts the power to issue "any order, process or
14 judgment that is necessary or appropriate to carry out the provisions of this title," and confers
15 equitable powers upon the bankruptcy courts. Old Orchard Inv. Co. v. A.D.I. Distrib., Inc. (In re
16 Old Orchard Inv. Co.), 31 B.R. 599 (W.D. Mich. 1983). Where necessary and appropriate, courts
17 can and should rely on Section 105(a) to appoint third persons to assist in resolving various issues
18 that arise in a bankruptcy case.

19 For example, in a case involving a debtor's motion to reject its collective bargaining
20

21 ¹³The Dow Corning court noted that there is some tension between the lack of authority for
22 appointing special masters in bankruptcy cases pursuant to Federal Rule of Bankruptcy Procedure
23 9031, on the one hand, and the express authority for bankruptcy judges to appoint experts under
24 Federal Rule of Evidence 706, on the other, and questioned whether the appointment of a panel of
25 experts as requested by the debtor would constitute the unauthorized appointment of a special
26 master. The court deemed the issue "of no significance" in light of its prior ruling that estimation
27 under Section 1129(a)(11) was not required, and the court therefore did not reach or decide the
28 issue. Id. at 591. PG&E submits that there should be and is little doubt that a bankruptcy court has
authority to appoint an expert to assist in the fact-finding process on time-consuming or complex
issues, since the Bankruptcy Rules expressly makes the Federal Rules of Evidence (including Rule
706) applicable to bankruptcy cases. Further, and in any event, because the Dow Corning court did
not fully discuss or vet the issue, it failed to appreciate that the function of an expert under Rule 706
is not to make the fact-finding decisions, but to render opinions and/or recommendations to assist
the bankruptcy court as the ultimate trier of fact.

1 agreement with a union pursuant to Section 1113, the debtor and a union were unable to reach a
2 compromise on the debtor's desire to reject. In re Royal Composing Room, Inc., 62 B.R. 403, 405
3 (Bankr. S.D.N.Y. 1986). While the court noted that Section 1113 provides no mechanism for the
4 court to appoint a mediator, it stated that Section 105(a) might permit the creation of the office of
5 "labor negotiator." See id. (citing In re Johns-Mansville Corp., 36 B.R. 743, 758 (Bankr. S.D.N.Y.
6 1984) (appointment of representative for future claimants appropriate as "courts readily use their
7 equitable powers to protect the substantive rights of persons similarly situated who are not before
8 the court); United States v. Sutton, 786 F.2d 1305, 1307 (5th Cir. 1986) (Section 105(a) simply
9 authorizes a bankruptcy court to fashion such orders as are necessary to further the purposes of the
10 substantive provisions of the Bankruptcy Code)).

11 In considering other options, that court contrasted the broad authority conferred by
12 Section 105 with the narrower functions accorded specific actors in the bankruptcy context, such as
13 a trustee, examiner, special master, or Rule 706 expert:

14 A trustee would supplant the debtor-in-possession, not assist it. An
15 examiner's role is investigative. The court need not consider whether a
16 special master might be able to so function as the bankruptcy court is
17 forbidden to appoint a special master. See Bankruptcy Rule 9031.
18 Although the bankruptcy court could appoint an expert under Rule 706(a) of
19 the Federal Rules of Evidence, an expert's function would appear to be
20 limited to rendering opinions to assist the court as the trier of the fact to
21 understand the evidence or to determine a fact in issue. See Rule 702 of the
22 Federal Rules of Evidence and Bankruptcy Rule 9017. (Id.)

23 Thus, although declining to exercise its power under Section 105, the court suggested that the
24 authority conferred by the section is both broad and flexible in comparison to the specialized
25 purposes of other Bankruptcy Code provisions.

26 Should the Court for any reason not want to authorize PG&E to retain experts pursuant
27 to Section 327(a) and find that the tasks required of an advisor in the claims estimation process
28 exceed the bounds of authority conferred by Rule 706 of the Federal Rules of Evidence, Section
105(a) represents a broader and more flexible grant of authority to this Court, enabling it to exercise
its discretion in the furtherance of other, substantive Bankruptcy Code provisions, such as the fact-
finding required in order to make the Plan feasibility determination required under Section
1129(a)(11).

1 We turn now to a fuller description of the Claims requiring estimation and the proposed
2 processes for moving forward with the estimation of the several categories of Claims. We pay
3 particular attention to the environmental claims category because it well illustrates the types of
4 overstatement and overlap (and the range of complex factual issues) that require estimation for
5 feasibility purposes, and two different potential approaches to the estimation process.

7 III.

8 ENVIRONMENTAL CLAIMS

9 PG&E believes that the actual amount of environmental liabilities attributable to PG&E
10 is a small percentage of the amounts asserted, which are dramatically overstated. By the very nature
11 of these environmental Claims, finally adjudicating and liquidating these Claims insofar as they may
12 be attributable to PG&E will be a long and complex process, conceivably stretching over years.
13 Such a process would inordinately consume the Court's and the Debtor's time and resources, delay
14 progress of the case, and frustrate the effort to reorganize, to the detriment of the estate and its
15 creditors.¹⁴ Therefore estimation of the environmental Claims is essential.

16 A. The Value Of Environmental Claims Against PG&E Is Vastly Overstated.

17 The State of California ("State"), through the Department of Toxic Substance Control
18 ("DTSC"), the Regional Water Quality Control Boards ("RWQCBs"), and other divisions, has filed
19 eight Claims involving alleged environmental liability at approximately 535 sites throughout
20 California, and asserts that PG&E owes three-quarters of a billion dollars in related cleanup,
21 oversight and monitoring costs, as well as other costs and penalties.¹⁵ Private party claimants and

22
23 ¹⁴Indeed, it is in part because of the complexities and long-term horizon in resolving many
24 environmental claims that the Plan Proponents, at the urging of key environmental claimants, have
25 provided for unimpaired, pass-through treatment under the Plan for all timely asserted
26 environmental claims, meaning that for virtually all purposes such claims will be resolved in the
27 ordinary course under applicable non-bankruptcy law in non-bankruptcy forums. See Plan §4.18.
28 Thus, by virtue of the provisions of the Plan, there will not be any need for the Court to actually
allow or disallow any timely asserted environmental claims, since the whole point of the pass-
through treatment is to provide that environmental claims will be determined by non-bankruptcy
courts and enforced by the claimants as if the bankruptcy case had never been commenced.

¹⁵See, e.g., Claim Nos. 12680-12682 filed by DTSC and Claim Nos. 12684, 12689-12692 and
12694 filed by various Regional Water Quality Control Boards.

1 local or quasi-governmental agencies (collectively "Non-State Claimants") have filed 113 Claims
2 involving alleged environmental liability at a number of these same sites, as well as at other sites in
3 California. These Non-State Claimants collectively assert PG&E owes approximately \$259 million
4 for PG&E's alleged share of cleanup, oversight, monitoring and other costs and penalties. The total
5 for environmental Claims thus is approximately \$1 billion.

6 The actual amount of environmental liabilities attributable to PG&E is a small
7 percentage of the Claims values submitted by the State and Non-State Claimants (collectively
8 "Environmental Claimants"). This is perhaps understandable in that the Environmental Claimants'
9 claimed amounts are often calculated based on the maximum, most far-fetched theoretical exposure
10 under environmental laws, since the Environmental Claimants are motivated to preserve their rights
11 to assert claims, rather than to try and determine the actual probable liability of the Debtor. Thus,
12 without intending this observation as a criticism of the Environmental Claimants, their cost
13 estimations are frequently without regard for the ultimate legal, factual, technical and practical
14 considerations applied by state and federal courts in resolving environmental claims and allocating
15 costs among potentially responsible parties ("PRPs"), and their cost estimations therefore bear little
16 relation to any real or probable liability outcomes.

17 1. The State's Inflated Environmental Claims.

18 The hyperinflated amount of the State's estimates is illustrated by three of the State's
19 Claims. In these three Claims alone—Casmalia Landfill, GBF/Pittsburgh Landfill and the
20 "Substation Sites"—the State asserts that PG&E is solely responsible for \$432 million in cleanup
21 costs. That amount of liability is extremely far-fetched and unrealistic.

22 a. Many Other Financially Viable Parties, Including DTSC, Also Are
23 Responsible Parties At The Casmalia Landfill, And PG&E's Share Of That
24 Liability Is A Small Percentage Of The Amount The State Is Claiming.

25 The Casmalia Landfill in Central California is being closed under the direction of the
26 Environmental Protection Agency ("EPA") pursuant to the Comprehensive Environmental
27 Response, Compensation and Liability Act ("CERCLA"), 42 U.S.C. §9601 et seq. During its
28 operation, over 10,000 entities, including the State, PG&E and many Fortune 500 companies, sent
hazardous wastes for disposal at this site. About 50 of those parties, including PG&E, have formed

1 a steering committee that has entered into a judicially approved consent order with EPA to
2 investigate the landfill contamination, establish the appropriate remedy, and install a functioning
3 remedial system. EPA has filed a claim in this bankruptcy case maintaining its authority to direct
4 PG&E regarding PG&E's allocated share of costs at Casmalia.¹⁶ PG&E does not plan to object to
5 that claim.

6 Notwithstanding the foregoing, DTSC has filed a Claim alleging PG&E owes it \$294
7 million for Casmalia—the total cost for cleaning up the landfill.¹⁷ The State's Claim overlooks the
8 following facts: (1) over 10,000 entities are responsible for waste disposal at the site; (2) PG&E
9 contributed less than 5.2% of the manifested waste sent there; (3) the State itself is a responsible
10 party at the site and contributed a significant volume of waste to the site; (4) EPA brought the
11 enforcement action, not the State; (5) substantial remediation work already has been completed at
12 the site under an agreement with EPA; (6) PG&E already has paid most of the costs it owes under
13 that agreement; and (7) the agreement with EPA looks to other, additional parties as responsible for
14 ongoing cleanup activities through the point where a final remedy is implemented. Those other
15 parties include many large, financially viable companies.

16 The State's \$294 million Casmalia-related Claim apparently rests upon the theory that
17 should it ever file an action (even though EPA already has done so), joint and several liability
18 theoretically could be available under environmental statutes such as CERCLA. The State might
19 then require PG&E to pay for the entire \$294 million cleanup, despite PG&E's status as but one of
20 thousands of companies that sent waste to the site, and despite EPA's ongoing enforcement of
21 CERCLA.

22 However, in reality, where, as here, EPA has brought claims against numerous
23 financially viable PRPs, joint and several liability is virtually never applied to require a single PRP
24 to pay the entire cost of the cleanup.¹⁸ Indeed, such a requirement would contravene Congress'

25
26 ¹⁶Claim No. 12677.

27 ¹⁷Claim No. 12682, at Exhibit 1, Table H. The amount claimed appears to be for all costs
associated with the cleanup of the entire Landfill, including oversight costs, fines and penalties.

28 ¹⁸United States v. Chem-Dyne Corp., 572 F. Supp. 802 (S.D. Ohio 1983).

1 express intent that the financial burden of cleaning up hazardous waste sites be allocated fairly
2 among all parties responsible for the creation and disposal of the waste.¹⁹ Pursuant to Section 113(f)
3 of CERCLA and Rule 14(a) of the Federal Rules of Civil Procedure, each PRP can bring a claim for
4 contribution seeking equitable allocation of cleanup costs during (or after) an action brought by EPA
5 or DTSC.²⁰ Further, if a PRP can prove its waste did not contribute to the cleanup costs or only
6 contributed to a divisible portion of the harm, there will be no liability for those unrelated costs.²¹

7 The practical result is that before significant cleanup costs are paid, they are virtually
8 always apportioned amongst the PRPs (here, including DTSC) in accordance with a variety of legal
9 and equitable factors. Those equitable factors often include the so-called Gore Factors,²² though
10 courts are not limited to those factors and may consider any facts relevant to allocating
11 responsibility.²³ Particularly in situations involving landfills, courts have allocated cleanup costs
12 according to the relative percentages of waste a PRP contributed, taking into account variations for
13 the relative toxicity of the wastes contributed.²⁴

14 ¹⁹Southland Corp. v. Ashland Oil, Inc., 696 F. Supp. 994, 998 (D.N.J. 1988).

15 ²⁰Mathis v. Veliscol Chem. Corp., 786 F. Supp. 971, 976 (N.D. Ga. 1991).

16 ²¹Prisco v. New York, 902 F. Supp. 374 (S.D. N.Y. 1995).

17 ²² (i) the ability of the parties to demonstrate that their contribution to a discharge,
18 release or disposal of a hazardous waste can be distinguished;
19 (ii) the amount of the hazardous waste involved;
20 (iii) the degree of toxicity of the hazardous waste involved;
21 (iv) the degree of involvement by the parties in the generation, transportation,
22 treatment, storage, or disposal of the hazardous waste;
23 (v) the degree of care exercised by the parties with respect to the hazardous
24 waste concerned, taking into account the characteristic of such waste; and
25 (vi) the degree of cooperation by the parties with Federal, State, or local officials
26 to prevent any harm to the public health or the environment.

23 126 Cong. Rec. 26,779, 26,781 (1980). The legislative history of the Superfund Amendments and
24 Reauthorization Act of 1986 cites the Gore factors as criteria that a court might consider in
25 apportioning liability under Section 113(f)(1). H.R. Rep. No. 99-253 (III) (1985), reprinted in 1986
U.S.C.C.A.N. 3038, 3042.

26 ²³Amoco Oil Co. v. Borden, Inc., 889 F.2d 664, 673-674 (5th Cir. 1989); Environmental
Transp. Sys., Inc. v. ENSCO, Inc., 969 F.2d 503, 508-509 (7th Cir. 1992).

27 ²⁴In re Bell Petroleum Serv., Inc., 3 F.3d 889, 895-903 (5th Cir. 1993) (adopting volumetric
28 approach to apportioning harm); Kamb v. United States Coast Guard, 869 F. Supp. 793, 799
(N.D.Cal. 1994) (same); Bancamerica Commercial Corp. v. Trinity Indus., Inc., 900 F. Supp. 1427,
(... continued)

1 Accordingly, PG&E's actual liability at the Casmalia Landfill is but a fraction of the
2 \$294 million amount set forth in the State's Claim, and such Claim can and should be estimated for
3 feasibility purposes.

4 b. PG&E Previously Settled All Its Obligations At The GBF/Pittsburgh
5 Landfill, And Other Parties Are Performing The Cleanup There, Secured By
6 A \$120 Million Insurance Policy.

7 The State's Claim asserts that PG&E has over \$37 million in liability for cleanup of the
8 GBF/Pittsburgh Landfill, again apparently on the theory that PG&E could be jointly and severally
9 liable for the entire cost of cleaning up the site. As with Casmalia, the State's Claim overlooks
10 crucial facts, such as: (1) hundreds of parties have sent waste to this landfill over many years;
11 (2) DTSC's cleanup orders regarding the landfill list between 50 and 100 responsible parties, many
12 of which are large, financially viable entities; and (3) PG&E contributed less than 1% of the waste at
13 the site. The issues identified above with respect to the Casmalia Landfill apply equally here, and
14 PG&E's actual responsibility for the GBF Landfill is a minor percentage of the \$37 million amount
15 asserted in the State's Claim.

16 Practically speaking, PG&E's actual dollar exposure at the GBF/Pittsburgh Landfill is
17 likely zero. Many of the responsible parties identified by DTSC in its cleanup order, including
18 PG&E and the former landfill owner and operator, have entered into a settlement agreement for the
19 GBF site. Under the terms of this agreement TRC, a reputable remediation company that has
20 successfully remediated several sites, took possession of the GBF site and is undertaking the cleanup
21 obligations there. As part of the settlement, TRC's performance has been secured by \$120 million
22 in insurance, and PG&E is indemnified for all claims by any person or agency arising out of the
23 contamination. In fact, DTSC has been working with TRC over the past year on implementation of
24 a final remedial action plan ("RAP") for the site. In short, there is another responsible, viable party
25 and significant insurance fully covering the liabilities for which the State has now asserted the same
26 Claim against PG&E, no doubt trying to preserve all of its potential rights and claims. But this

27 (continued . . .)
28 1473-1474 (D.Kan. 1995) (allocating by volume and toxicity), aff'd in part, rev'd in part on other
grounds, 100 F.3d 792, 802-803 (10th Cir. 1996).

1 “hedging” by the State, while understandable as a means of protecting its theoretical right to assert a
2 joint-and-several-liability claim against PG&E, in no way realistically measures PG&E’s “true” or
3 likely remaining liability, which in fact is zero. Thus, if PG&E is correct, the State’s Claim relating
4 to the GBF/Pittsburgh Landfill should be disregarded (i.e., valued at zero) for feasibility purposes.

5 c. The State’s \$100 Million Claim For Substation Contamination Is
6 Speculative And Contrary To Fact.

7 The State’s Claim asserts that PG&E owes \$100 million for hundreds of substations
8 scattered across Northern California,²⁵ several of which are no longer owned or operated by PG&E.
9 The State claims this \$100 million (about \$300,000 for each substation) is for “future investigation
10 and remedial action” of polynuclear aromatic hydrocarbons (“PAHs”) and PCBs. The only
11 documentation it has submitted for this Claim, however, is an alphabetical list of 301 substations.
12 The State concedes its estimates are based upon “minimal information” and premised upon the
13 “assumption” that it will be forced to undertake cleanup at all these sites. Further, the State
14 essentially admits it has virtually no evidence of contamination at these sites.

15 The State’s assumption that remediation is or may be required at all these 301 sites, and
16 its claim that PG&E is a “significant source” of contamination, are factually unsupported. For
17 example, the State listed all 32 substations in San Francisco as sites that allegedly contributed to its
18 \$100 million estimate. The State apparently made this claim without investigating any of those
19 substations, since it is improbable that many of the listed substations could be the source of soil or
20 groundwater contamination. For example, 13 of the listed substations are located within buildings
21 or concrete vaults and have at least one, and often several, concrete building floors between the
22 substations and any soil or groundwater. One of those substations is located on the 54th floor of the
23 Bank of America building in downtown San Francisco. Further, not all of the equipment in
24 substations listed in the Claim of the San Francisco Bay Regional Water Quality Control Board is
25 classified as PCB equipment, which significantly impacts remediation costs. Similar facts apply to
26

27 ²⁵Claim No. 12690 by the San Francisco Bay Regional Water Quality Control Board
28 (“SFBRWQCB”), at 2 and Exhibit 2.

1 the City of Oakland substations listed by the State.

2 In addition, the San Francisco Bay Regional Water Quality Control Board is aware of
3 PG&E's pilot program for investigation of substations. As part of that program, 12 larger
4 substations were selected for testing, and over 200 soil samples were taken in close proximity to the
5 electrical equipment at those substations. None of those samples detected PAHs, and none
6 contained PCB concentrations at or above actionable levels. Consequently, the data that is available
7 on these sites indicates the State's estimates of cleanup costs are vastly overstated, if not entirely
8 speculative. Absent factual support that an identifiable and imminent threat of harm to the public
9 health and welfare or the environment exists, these claims should fairly be valued at zero.
10 Accordingly, here too it is appropriate that PG&E have the opportunity to have this Court review
11 and estimate the State's Claim for Plan feasibility purposes.

12 2. PG&E Already Has Settled Its Liabilities At A Number Of Sites Which The
13 Claimants Include Within Their Respective Claims.

14 PG&E has previously entered into Consent Decrees and other Settlement Agreements
15 resolving its liability for at least seven of the sites listed by the State in its Claims, including, for
16 example, the Casmalia and GBF Landfills discussed above. Pursuant to these Consent Decrees and
17 Settlement Agreements, PG&E has liquidated its obligations for the presence of contaminants at
18 these sites.

19 The State unaccountably assigns a value of \$340,058,178 to those sites, claiming PG&E
20 is 100% responsible for those costs, when it knows PG&E has already paid its allocable share of the
21 cleanup costs in settlement either to EPA, the State itself, or to other PRPs. Under these Settlement
22 Agreements, the other PRPs are contractually obligated to pay for cleanup. Under the Consent
23 Decrees, EPA or the State itself have provided contribution protection to PG&E. Thus, PG&E
24 believes the actual value of the State's claims for these eight sites is \$0, and the Court should thus
25 examine and estimate this Claim for feasibility purposes.

26 3. Claimants Estimate Total Cost Rather Than Present Value.

27 The State further inflates its Claims by failing to recognize that cleanup of a
28 contaminated property is a multi-phased project and that costs are not incurred or paid all at once or

1 immediately. Rather, the costs of investigation, remediation and monitoring are spread out over an
2 extended period. Based on PG&E's experience, the average time for cleaning up manufactured gas
3 plant ("MGP") sites is in excess of six years, with smaller costs incurred in the early years. The
4 time required to clean up a landfill could be decades depending upon the size of the landfill and the
5 nature of the contamination. Remediation costs at other types of sites are similarly spread out over
6 time.

7 Nonetheless, the State's claims are styled as if the entire inflated or phantom amounts
8 are to be paid all at once. However, the relevant consideration is the expected annual expenditures
9 of PG&E for environmental liabilities, and PG&E's annual cost for environmental liabilities is far
10 less than the State suggests. PG&E incurred expenditures of approximately \$16 million for its entire
11 hazardous substances cleanup program in 1999, and approximately \$18.5 million in 2000. PG&E's
12 cleanup budget for 2001 and 2002 are consistent with the amounts expended in prior years. There is
13 no legitimate reason why this measured, empirical approach to addressing contamination at sites for
14 which PG&E has liability should suddenly be ignored or cast aside, particularly in light of the pass-
15 through treatment of environmental claims under the Plan. See footnote 14, supra.

16 4. The Environmental Claims Filed By The Non-State Claimants Are Similarly
17 Inflated.

18 Claims filed by non-state claimants are similarly flawed legally and factually, or are
19 otherwise inappropriately valued. Many of these Claims overlap those of the State, and often are
20 based on invalid assumptions. In some the claimant is itself a PRP and the asserted value of such
21 Claims is not always limited to that portion of costs incurred that exceeded or is likely to exceed the
22 claimant's own equitably allocated share. The following examples illustrate some of the complex
23 issues raised by these frequently overlapping Claims.

24 • The City and County of San Francisco has filed a Claim regarding various sites that it
25 collectively values at over \$75 million. Many of these Claims, such as the \$56 million Claim
26 relating to the Potrero Power Plant ("PPP"),²⁶ address sites that are the subject of claims filed by

27 _____
28 ²⁶Claim No. 12640.

multiple responsible parties are appropriate, as is typically the case, a claim should reflect only the Debtor's allocated share.²⁹ Estimating the actual values allocable to PG&E will require an understanding of the allocation decisions of multiple state and federal non-bankruptcy courts applying sometimes divergent and contradictory state and federal substantive law and complex scientific evaluations to an array of factual scenarios. Simply determining how estimated environmental liability should be allocated at each of hundreds of sites will be time consuming.

For example, depending upon the source of a release, the chemical(s) released, and the types of media impacted, various agencies could have overlapping and conflicting jurisdiction.³⁰ Each of these agencies has its own statutory authority, standards, procedures, methods and requirements for public input, enforcement mechanisms, preferred scientists, consultants and attorneys, allocation procedures, and cleanup obligation enforcement. In addition, any number of overlapping state and federal statutes could be implicated in a given claim.³¹ Each of these statutes has its own standards for establishing liability, the basis for cost recovery, cleanup procedures, standards and goals, and recoverable costs and penalties. Given this complex overlap of enforcement agencies and statutes, simply determining which standards of liability apply and what costs are appropriate will be time consuming.

Further complicating the estimation process is the need to determine whether a particular site presents a risk to the public health and welfare or the environment. Determining this issue is a condition precedent to assessing environmental liabilities, and may involve an assessment by scientific and environmental remediation experts who often differ among themselves.³²

²⁹Kane v. Johns-Manville Corp., 843 F.2d 636 (2d Cir. 1988); In re A.H. Robins Co., 880 F.2d 694 (4th Cir. 1989).

³⁰E.g., DTSC, RWQCBs, EPA, California Department of Health Services, various California Air Quality Management Districts, California Department of Fish and Game, California Attorney General, and other certified local oversight agencies.

³¹E.g., the Federal Clean Water Act ("CWA"), Clean Air Act ("CAA"), Toxic Substance Control Act ("TSCA"), Resource Conservation and Recovery Act ("RCRA"), CERCLA, and California's Hazardous Substance Account Act ("HSAA"), Porter-Cologne Water Quality Control Act, common law claims such as nuisance and trespass law, Proposition 65, and the Fish and Game Code.

³²E.g., chemists, geologists, hydrogeologists, toxicologists, environmental engineers and health risk assessors.

multiple claimants and typically involve a complex land use history. \$37 million of this \$56 million Claim apparently is based on a contractual obligation by PG&E to Mirant Corporation for remediation of the power plant site as the new plant is built. PG&E believes that the City has no standing under the contract or relevant environmental law to assert the Claim. In addition, the City is itself a PRP because its adjacent property was historically used as a sugar refinery, steel mill and towing yard.

- The City of Vallejo has filed two Claims regarding a single MGP site in Vallejo, each for over \$33 million, which MGP site is also subject to two State Claims in excess of \$1.6 million.²⁷ In addition to being duplicates, these Claims are materially overstated because they seek cleanup costs for environmental conditions associated with the long history of industrial uses in the area, including ship building, auto wrecking, fuel storage, and Kaiser steel operations, with which PG&E was not involved.

B. If The Environmental Claims Must Be Estimated On A Claim-By-Claim Basis, Utilization Of A Court-Appointed Expert To Assist Will Materially Streamline The Estimation Process.

Not only are the environmental claims in the main grossly inflated and premised upon overly generalized legal principles, but the State in particular and others in general disregard the scientific and factual inquiries necessary to derive technically valid and scientifically supportable valuations. Because the environmental claimants have taken such an expansive approach to valuation, if the Court determines that the estimation process must proceed on a Claim-by-Claim basis (rather than a statistical approach to estimating the environmental Claims in the aggregate, as discussed in Part III.C. below), PG&E will be required to challenge most Claims as to hundreds of sites, and the Court will need to estimate the amounts properly attributable to these Claims. An expert skilled in evaluating such claims could facilitate this process, as explained below.

In undertaking this estimation process, the Court should follow applicable environmental law as closely as possible.²⁸ For example, where equitable allocations among

²⁷Claim Nos. 9805, 10598.

²⁸In re National Gypsum Co., 139 B.R. 397, 415 (N.D.Tex. 1992).

Experts and attorneys typically undertake studies and reach agreement to determine, among other things, (1) the nature and extent of the investigation required, (2) the extent of the contamination, (3) the feasibility and appropriateness of a remedial approach, including its cost-effectiveness, (4) which party is responsible for which portion or volume of the contamination, (5) whether a threat to the public health and welfare or the environment exists, (6) which cleanup standards should apply, (7) the feasibility of attaining those standards, (8) the best remediation methods to use under a given set of circumstances, and (9) what type of post-remediation monitoring is appropriate. Each of these factors can impact the cost of cleanup at a site and may need to be evaluated prior to determining whether a cleanup is warranted, and if so the cost, which in turn provides the basis upon which the estimate of the claims asserted against PG&E can be determined.

Further, in the common situation where multiple parties have owned, operated at, or contributed to the contamination at a site, the Court will need to allocate the costs of cleanup among those parties since PG&E as a practical matter only has real-world liability for its allocable share. Application of these equitable apportionment factors is factually intensive.³³ It can involve generating, presenting and assessing volumes of historical, technical and financial information, much of it in the form of expert opinion. The discussion of Claims filed by the City and County of San Francisco and the City of Vallejo demonstrate the complexity of the issues of property ownership, overlapping releases of contaminants, hydrogeology and chemistry that can be involved in allocating liability.

If the Court determines to estimate the environmental Claims on a Claim-by-Claim basis, the Debtor's retention of an expert pursuant to Section 327(a) (or the Court's appointment of an expert pursuant to Rule 706 or Section 105), who could develop the relevant facts and make recommendations regarding the governing law, the allocation of liability and ultimately PG&E's probable liability, would greatly streamline the estimation of these Claims for feasibility purposes.

³³The courts are not limited to the Gore Factors and may consider any fact or set of factors that reasonably relate to a PRPs "fault" in allocating liability. United States v. Rohm & Haas Co., 939 F. Supp. 1142, 1151 (D.N.J. 1996). See, e.g., Amoco Oil v. Borden, Inc., 889 F.2d at 673-674 (applying Gore Factors).

1 C. A Statistical Approach To Estimation Of Environmental Claims In The Aggregate, With
2 The Assistance Of An Expert, Appears To Be A More Efficient Estimation Alternative.

3 As is set out in the foregoing discussion, estimation of the value of the environmental
4 claims brought by the State and private parties could prove to be a very lengthy, fact intensive and
5 legally challenging endeavor, requiring a technical and legal analysis of the specific conditions and
6 history at the many sites listed in the various Claims. This effort will be complicated by the need to
7 deal with the many sites where no cost has been assigned for site remediation or where, as exists in
8 many instances, duplicate or overlapping claims have been submitted.³⁴

9 As the Court is aware, the Plan provides that all environmental claims will pass through
10 the bankruptcy unimpaired. Plan §4.18. For this reason, the issue for the Court's consideration is in
11 reality not the estimated aggregate amount of the environmental Claims at present, but rather, the
12 amount of expense the reorganized Debtor can expect to face in the future on an annual basis as a
13 result of the environmental liability upon which the environmental Claims are based. Thus, a more
14 reasonable approach to estimating the value for sites where PG&E has not already resolved its
15 liability through settlements or the entry of judicially approved Consent Orders is to utilize a
16 statistical analysis to estimate the value of these Claims as they will be incurred over time.

17 For the past 15-plus years, PG&E has, under the supervision of State agencies,
18 conducted an ongoing contamination remediation program³⁵ to address environmentally impaired
19 sites. PG&E's budgeting and planning for the future of this remedial program remains consistent
20 with the trend in past expenditures and resource commitments. PG&E expects, and there is no
21 reason to believe otherwise, that this rate of expenditure and resource commitment will remain
22 consistent into the future.

23
24 ³⁴In fact, government agencies have themselves filed duplicate and overlapping claims. The
25 City and County of San Francisco, the DTSC and the SFBWRQCB have all filed claims for the
26 Potrero Power Plant site; the DTSC and the Central Valley Regional Water Quality Control Board
27 have filed claims for the Kern Power Plant Facility, while the DTSC and the SFBWRQCB have
28 filed claims for Station T in San Francisco.

³⁵See Motion for Authority to Continue Hazardous Substance Cleanup Program;
Memorandum of Points and Authorities (docket no. 801), and supporting Declaration of Robert
Doss (docket no. 802), filed with the Court on June 6, 2001, which together provide a detailed
description of PG&E's historical remediation program and of agency oversight of that program.

1 Based upon PG&E's history of expenditures and its experience and expertise in
2 implementing remedial programs, it is reasonable for the purposes of estimation to utilize this
3 historical information to derive a statistically and practically significant estimate of the realistic
4 value of the PG&E's true liability on a going-forward basis. Implementing a statistical procedure to
5 estimate these claims in the aggregate will eliminate the need to undertake the expensive and time-
6 consuming process of determining the value for each of the sites for estimation purposes, while
7 simultaneously providing the Court with an acceptable method to reasonably estimate all of the
8 environmental Claims for feasibility purposes.

9 Another advantage to the approach of estimating environmental Claims in the aggregate
10 based on statistical methodology is that there is no need to determine the significance, for Plan
11 feasibility estimation purposes, of POCs that do not state or incorporate any specific dollar amount.
12 Under the statistical approach to estimation that takes into account a variety of historical and current
13 data to estimate go-forward environmental liabilities in the aggregate, it is irrelevant whether any
14 particular POC states a dollar amount because the whole range of probable environmental liabilities
15 should in any event be included in the statistically-based estimation. On the other hand, if a Claim-
16 by-Claim approach is taken, one must decide what (if any significance) should be accorded to a
17 POC that fails to state any amount, i.e., whether such Claim must be estimated, or whether such
18 Claim should not be considered for feasibility purposes because it states no amount and therefore
19 should be presumed to be a zero dollar amount.³⁶

20 If the Court determines to proceed with the statistical approach to estimating claims in
21 the aggregate, either PG&E should be authorized to retain pursuant to Section 327(a), or this Court
22 should retain pursuant to Rule 706 of the Federal Rules of Evidence or Section 105(a), an expert
23 qualified in assessment of environmental liabilities based on statistical analysis and extrapolation.

24 The estimation process selected, whether it be a technical/legal analysis of all sites set
25

26 ³⁶If the Court determines to proceed on a Claim-by-Claim approach to estimation with respect
27 to any category of Claims, PG&E proposes that any POC in such category that does not state or
28 incorporate any dollar amount should be valued at zero for Plan feasibility purposes, since there is
little basis to begin analyzing or estimating a Claim where the claimant has not been specific enough
to state a dollar amount.

1 out in the environmental Claims, on the one hand, or a statistical analysis based on historical
2 remediation efforts, on the other, will dictate the character of the estimation expert required for the
3 process. In either case, the effort will require material time of one or more experts with significant
4 technical expertise in working with large volumes of information and data.

6 IV.

7 GENERATOR CLAIMS

8 Sellers of power and ancillary services ("Generators") to the Power Exchange
9 Corporation ("PX") and Independent System Operator ("ISO"), supposedly for PG&E's benefit,
10 have filed over 200 Claims totaling about \$8 billion. Because these Claims vastly exceed the
11 amounts owed by the Debtor, PG&E will be filing objections if these Claims cannot be consensually
12 resolved. However, because these objections may take a substantial time to resolve, PG&E will
13 request that the Court estimate the reasonable value of the Generators' Claims for Plan feasibility
14 purposes. Through the estimation process, PG&E will seek to have the aggregate dollar amount of
15 generator Claims reduced by more than \$5 billion for Plan feasibility purposes.³⁷ The categories
16 described below are illustrative (but not a complete or exhaustive description) of the issues relevant
17 to the estimation of Generator Claims. Each category involves many Claims, and many Claims fit
18 in more than one category.

19 A. Generator Claims Asserting PG&E Owes Sums Actually Owed By Southern California
20 Edison.

21 Most Generators filed individual Claims for the aggregate amounts they believe PG&E,
22 Southern California Edison ("SCE"), the PX and ISO owe them. PG&E's consultant has analyzed
23 the available data and allocated each Generator's charges between PG&E and SCE. PG&E
24 estimates that approximately \$850 million of the Generator Claims are properly attributable to SCE
25 and should be deducted from the gross amount of the Generator Claims.

26
27 ³⁷ After taking into account the results of the Court's estimation process and the ruling on
28 PG&E's pending objections to duplicate claims, PG&E believes the Generator Claims ultimately
will be valued for Plan feasibility purposes at approximately \$1.1 billion.

1 B. PX Cash Holdings.

2 The Generator Claims against PG&E also include approximately \$400 million already
3 paid by PG&E and others to the PX, but currently being held by the PX. This \$400 million
4 represents partial cash payments from PG&E and other market participants to the PX, as well as
5 cash the PX has collected by calling on surety bonds and lines of credit. Normally, the PX would
6 have distributed this cash to sellers of power upon receipt, but given the circumstances of non-
7 payment and partial payment by various market participants, coupled with the bankruptcy of the PX,
8 the PX did not pay this cash out to the generators. The PX is holding such cash pending the
9 outcome of proceedings at FERC and other forums. Upon the conclusion of those proceedings, the
10 \$400 million in cash held by the PX will be distributed to parties with valid claims against the PX,
11 as determined by those various proceedings. PG&E is prepared to demonstrate and support its
12 estimation request with an analysis showing approximately \$400 million of the Generator Claims
13 are not owed by PG&E, but rather are owed by the PX and/or are attributable to the PX's cash
14 holdings.

15 C. Claims For Electricity And Ancillary Services Provided On Or After 1/17/01.

16 The PX, the Department of Water Resources ("DWR"), and many Generators have
17 asserted claims for power purchases made on or after January 17, 2001. All of these purchases were
18 made by DWR and ISO, not PG&E. Indeed, as of January 17, 2001, PG&E was precluded by the
19 creditworthiness requirements of the ISO and PX tariffs from purchasing power from third-party
20 suppliers. Under governing FERC orders and authorizing legislation, PG&E is not responsible for
21 any charges for power purchases made on or after January 17, 2001. Many Generators did not
22 segregate pre-January 17 and on-or-after-January 17 amounts in their Claim documentation, and
23 PG&E will request estimation of those Claims based on its consultant's analysis of energy purchases
24 by the ISO and DWR on or after January 17, 2001. PG&E's consultant has preliminarily estimated
25 such power purchases made on or after January 17, 2001 at \$1.5 billion.

1 D. Generator Claims Should Be Reduced By At Least \$400 Million Because They Are
2 Based On Prices FERC Has Determined Are Subject To Refund As Unjust And
3 Unreasonable.

4 FERC has found that prices charged by many Generators selling into the PX and ISO
5 were not just and reasonable. FERC has held extensive hearings and issued a series of decisions
6 ordering refunds from Generators selling into the PX and ISO after October 1, 2000, under specified
7 criteria. On July 25, 2001, FERC issued an "Order Establishing Evidentiary Hearing Procedures,
8 Granting Rehearing in Part, and Denying Rehearing in Part,"³⁸ that established the scope of, and
9 methodology for, the calculation of refunds related to transactions in the electric spot markets
10 operated by the ISO and the PX. The July 25 Order also set an evidentiary hearing to calculate the
11 refunds based on the established methodology. FERC later issued a December 19, 2001 Order
12 clarifying the scope of its July 25 Order and reaffirming the refund methodology set forth in that
13 Order.³⁹

14 PG&E's consultant has modeled the likely outcome of the FERC refund process, which
15 probably will not be completed within any reasonable time frame contemplated for confirmation of
16 the Plan. PG&E believes that the FERC-ordered refunds will reduce the Generator Claims by at
17 least \$400 million. PG&E therefore will request estimation of those Claims, based on its
18 consultant's analysis of the anticipated FERC-ordered refund.

19 E. The PX Claim Duplicating That Of The Generators.

20 The PX has asserted a Claim (no. 7411) for more than \$1.7 billion for energy and
21 ancillary services duplicating Claims of Generators which sold into the PX and ISO. A handful of
22 Generators did not file Claims, but instead relied on the PX Claim to meet the claims bar date. For
23 the most part, however, the PX Claim is duplicative of the Claims filed by Generators. PG&E will
24 ask the Court to estimate the PX Claim to take into account only the Claims of those few Generators
25 which did not file their own Claims.⁴⁰

26 ³⁸San Diego Gas & Elec. Co. v. Sellers of Energy & Ancillary Serv., 96 Fed. Energy Reg.
27 Comm'n Rep. (CCH) ¶61,120 (July 25, 2001).

28 ³⁹San Diego Gas & Elec. Co. v. Sellers of Energy & Ancillary Serv., 97 Fed. Energy Reg.
 Comm'n Rep. (CCH) ¶61,275 (December 19, 2001).

⁴⁰PG&E intends to object to the PX Claim, at least to the extent it is duplicative of POCs
 (. . . continued)

1 F. Underscheduling Penalty Claims.

2 In December 2000, FERC ordered the ISO to assess underscheduling penalties to
3 discourage market participants from using the ISO's real-time market as the primary spot market.⁴¹
4 The underscheduling penalties were to be assessed by the ISO against underscheduling market
5 participants and distributed to scheduling coordinators that could accurately schedule.⁴² ISO market
6 participants have filed Claims seeking approximately \$400 million in underscheduling penalties.
7 The penalties were stayed, and, upon rehearing, were invalidated by FERC before they were
8 assessed by the ISO.⁴³ PG&E will object to all Claims seeking underscheduling penalties and will
9 request the Court to estimate such Claims as zero for Plan feasibility purposes.

10
11 V.

12 ENERGY SERVICE PROVIDER CLAIMS

13 There are over \$580 million in Claims from energy service providers ("ESPs") and their
14 Direct Access ("DA") customers for a credit commonly referred to as the DA credit. DA customers
15 purchase their energy from ESPs but use PG&E's distribution and transmission services. Pursuant
16 to CPUC orders, these customers are charged by PG&E the same bundled service rate as other
17 PG&E customers. However, since they buy their energy from an ESP, they receive a credit off the
18 bundled service rate in an amount intended to approximate the energy component of PG&E's
19 bundled service rate. The methodology for calculating the DA credit was established by the CPUC
20 in Decision No. 97-08-056 and Resolution E-3510, and was intended to achieve the CPUC's
21 objective of ensuring that during the rate freeze DA customers pay the same unbundled component

22 _____
23 (continued . . .)
24 timely filed by Generators. Alternatively, PG&E may object to the entire PX Claim as duplicative,
25 and stipulate that those Generators who did not file their own POCs because they were included in
26 the PX Claim can proceed to file their own POCs, which will be deemed to be timely filed.

25 ⁴¹San Diego Gas & Elec. Co. v. Sellers of Energy & Ancillary Serv., 93 Fed. Energy Comm'n
26 Rep. (CCH) ¶61,294 (December 15, 2000).

26 ⁴²97 Fed. Energy Comm'n Rep. ¶61,275; 93 Fed. Energy Comm'n Rep. ¶61,294, at 62,002-
27 04.

27 ⁴³In re Distrigas of Mass. LLC., 93 Fed. Energy Reg. Comm'n Rep. (CCH) ¶61,275 (July
28 27, 2000).

1 charges, other than energy, as bundled service customers. The CPUC ordered PG&E to use the PX
2 price to approximate the energy component of the bundled rate, under the assumption the PX price
3 would reflect the amount PG&E actually saved by not being required to purchase energy for the DA
4 customers. As the PX prices began to skyrocket, so did the DA credit, and the DA customers'
5 charges from PG&E began to reflect amounts due to them from PG&E, i.e., the charges became
6 "negative."

7 PG&E believes the rate freeze and DA credit should have ended no later than August
8 2000. However, even assuming the rate freeze will not end until March 2002, the DA credit Claims
9 are overstated. FERC's July 25 Order discussed above effectively reduces PX wholesale energy
10 prices from October 2, 2000 to June 20, 2001, by requiring generators to refund amounts received or
11 due from the utilities for generation used during that period. FERC's July 25 Order reduces the DA
12 credit because it reduces the amount PG&E saved by not serving as the DA customers' ESP during
13 that period. The reduction of the PX price reduces the DA credit by approximately \$100 million
14 from October 20, 2000 through January 17, 2001. Because it is unlikely the administrative
15 processes will be resolved within any reasonable time frame for obtaining confirmation of the Plan,
16 PG&E will seek a reduction in the amount of the DA credit Claims for Plan feasibility purposes.
17 PG&E believes a reasonable estimation can be made based on its consultant's FERC refund
18 analysis.

19 Further, some of the DA credit Claims are overlapping because both the ESPs and their
20 DA customers claim a right to the same DA credits. Thus, in the estimation process, PG&E also
21 will ask the Court to reduce the DA credit Claims by approximately \$60 million due to duplicative
22 Claims.

24 VI.

25 COMMERCIAL CLAIMS

26 There are approximately nine miscellaneous commercial Claims for amounts totaling in
27 excess of \$4 billion to which PG&E will be filing objections. However, because they are grossly
28 inflated and because it is unlikely they can be resolved any time soon, they will need to be estimated

1 for feasibility purposes.

2 One such Claim, by Sierra Pacific Industries ("SPI"), is for "at least" \$1,108,361,147,
3 mostly for alleged punitive damages, and arises out of PG&E's alleged interference with SPI's
4 efforts to sell its QF power at market prices well above the prices SPI had contracted to accept. The
5 Court is familiar with this Claim, having adjudicated preliminary injunction, partial summary
6 judgment and remand motions. The size of this Claim and its heavy reliance on punitive damages
7 make it appropriate for estimation, and by virtue of the nature of the Claim and this Court's
8 familiarity with it, it does not appear that retention of an expert is necessary or appropriate in
9 connection with such estimation.

10 The other commercial Claims total about \$3 billion and could be estimated by the Court
11 with or without the assistance of an expert. They cover a wide range of causes of action. For
12 example, two Claims, aggregating over \$100 million, are by irrigation districts alleging federal
13 antitrust violations stemming from PG&E's refusal to interconnect the districts' proposed electric
14 facilities. PG&E contended in federal court that each scheme proposed "sham wholesale"
15 transactions in violation of the Federal Power Act. The District Court's Order dismissing one of the
16 complaints without leave to amend is under submission to the Ninth Circuit. The other case is
17 currently inactive. Neither Claim is likely to be resolved within the timeframe contemplated by the
18 Plan.

19 Two other Claims for a total of almost \$50 million are by 34 property developers
20 seeking punitive damages only, allegedly arising out of PG&E's failure to obtain CPUC approval
21 before changing the practice of paying refunds for gas franchise costs. The punitive nature of the
22 damages sought make these Claims particularly appropriate for estimation.

23 A \$25 million Claim is by a residential developer for alleged breach of a contract to
24 relocate gas and electric transmission facilities. The claimant alleges it provided land to which the
25 facilities could be moved and PG&E alleges it did not. The Claim is grossly inflated because it fails
26 to take into account the existence of highly disputed factual and legal issues.

27 One QF has filed a Claim seeking approximately \$10 million for alleged violation of the
28 fixed price period of its Interim Standard Offer 4 power purchase agreement. PG&E has

1 successfully defended identical suits by QFs before the same judge hearing the pending case. Other
2 commercial Claims assert a variety of breaches and violations allegedly arising under a variety of
3 causes of action.

4 5 VII.

6 TORT CLAIMS

7 PG&E believes that an expert could provide invaluable assistance in estimating the
8 aggregate value of the approximately 450 miscellaneous personal injury, wrongful death and
9 property damage Claims submitted as timely POCs. These Claims have an alleged value of more
10 than \$315 million, which is significantly larger than any reasonable estimate of PG&E's true
11 liability to these claimants.⁴⁴

12 Adjudicating and liquidating each of these 450 diverse Claims—ranging from slip and
13 falls to auto accidents to alleged asbestos exposure to electric contact wrongful death cases—will be
14 extremely fact-intensive. If considered individually, it could take many months of evidentiary
15 hearings to resolve these miscellaneous tort Claims, and such a protracted process will
16 disproportionately consume the Court and the Debtor's time and resources and will unduly delay
17 and frustrate the reorganization. An aggregate estimation procedure is the most reasonable method
18 for resolving these issues and Claims.

19 Accordingly, PG&E proposes that the Court authorize PG&E to retain (pursuant to
20 Section 327(a), or that the Court appoint (pursuant to Rule 706 or Section 105(a)) a
21 statistician/claims estimation expert to estimate the aggregate value of the miscellaneous tort Claims
22 based upon such factors as the number of Claims filed, the type or category of Claim made, the type
23 of injuries alleged, the data contained in the POCs submitted, and PG&E's historical litigation data

24
25 ⁴⁴ As an example of how inflated the alleged dollar value of these Claims is, between 1996 and
26 2000, PG&E resolved an average of over 15,000 personal injury and property damage claims per
27 year, including litigation and pre-litigation claims, at an aggregate average cost of \$31 million per
28 year (excluding individual payments greater than \$5 million and unusual events such as the 12/8/98
outage, which generated more than 19,000 claims.) Furthermore, PG&E's third-party claims
department, which handles pre-litigation matters, is currently resolving bankruptcy claims at about
5% on average of the demand value.

1 from the last five years, including the average amount of the settlements for the various types of
2 claims in designated categories. The use of five years of historical data to determine a reasonable
3 estimate for these Claims is particularly logical and appropriate because PG&E's universe of
4 miscellaneous tort cases on April 6, 2001 was not materially different from any other time in the
5 previous five years. Under this proposal, the expert will review samples of historical claims within
6 the designated categories and will sort the POCs into similar categories. By using a variety of
7 statistical approaches predicated on PG&E's actual experience with similar type claims, the expert
8 will estimate the aggregate value of the miscellaneous tort Claims. Because so much historical data
9 is available for the estimation process, a statistically and practically significant estimate should be
10 possible without engaging in the time-consuming task of reviewing each claim on the merits. See
11 generally parallel discussion in Part III.C. above re environmental Claims. And, importantly, as
12 already noted, this estimation will have no binding effect on the individual claimants respecting the
13 allowable amount of their Claims or the distribution they will receive on their Claims.⁴⁵

14 If an aggregate estimation method is not used, the 450 Claims will have to be addressed
15 individually, applying a fact-intensive, legal analysis. This would be a long, tedious process that
16 would constitute an unnecessary drain on the Court's resources and that is not necessary for Plan
17 feasibility determination purposes. Indeed, part of the reason a Claim-by-Claim review would be
18 difficult is because of the poor quality of information available in the POCs. Many of the tort
19 claimants have taken an unrealistic approach to the valuation of their Claims, perhaps believing that
20 there is settlement or other leverage in inflating rather than estimating actual worth. Thus, many
21 claimants have provided little in the way of information to readily and accurately assess liability and
22 damages. As to a significant number of the miscellaneous tort Claims, PG&E currently has little or
23

24 ⁴⁵Bankruptcy courts are constrained from utilizing abbreviated estimation procedures to
25 definitively adjudicate and resolve personal injury and wrongful death claims, pursuant to 28 U.S.C.
26 §157(b)(2)(B). However, bankruptcy courts may estimate such claims so long as that estimation is
27 not for "the purposes of distribution." See, e.g., In re UNR Indus. Inc., 45 B.R. 322 (N.D.Ill. 1984).
28 Accordingly, courts permit the use of estimation procedures to value tort claims for a variety of plan
confirmation purposes, including determining whether a proposed plan is feasible. See, e.g., In re
A.H. Robins Co., 88 B.R. 742, 751-52 (Bankr. E.D.Va. 1988), aff'd, 880 F.2d 694 (4th Cir. 1989);
In re Farley, Inc., 146 B.R. 748, 753 (Bankr. N.D. Ill. 1992); In re Poole Funeral Chapel, Inc., 63
B.R. 527, 533-34 (Bankr. N.D. Ala. 1986).

1 no information other than that contained in the POC form and any accompanying attachments.

2 Discovery will be necessary to garner the data to individually evaluate each of these Claims.

3 The following will serve as a few illustrative examples of how overstated many of the
4 miscellaneous tort Claims are and how time-consuming it would be to individually assess the value
5 of these Claims:

6 • One of the miscellaneous tort Claims against PG&E is for \$14 million and arises out of
7 an explosion and fire that occurred at a residence. Investigations by the police department, fire
8 department, District Attorney's office, and the Bureau of Alcohol, Tobacco and Firearms
9 determined the cause to be detonation of illegal fireworks in the home. There are multiple
10 defendants named in this consolidated action.

11 • A Claim for \$5 million is premised on the notion that "balls of electricity" have flown
12 off the PG&E overhead lines causing personal and property damage to claimants. Extensive testing
13 performed by public and private entities has not substantiated this Claim. PG&E believes the actual
14 value of this Claim is zero.

15 • Another Claim involves an auto accident in which the claimant rear-ended a PG&E
16 truck. The personal injury Claim is for \$1 million and alleges that claimant sustained a fractured
17 leg, cheek bone and jaw injury. PG&E disputes liability and contends in any event that the damages
18 are vastly overstated.

19 • A \$1.4 million Claim is for contribution and indemnity for property damage allegedly
20 resulting from the diversion of water onto land owned by a recreation park. PG&E is not a party to
21 the underlying lawsuit but has received a \$1.4 million POC for indemnity from one of the
22 defendants named in the suit. PG&E's sole information is limited to the assertions contained in the
23 complaint and the stated amount of the Claim. Discovery will be required to determine the basis of
24 PG&E's alleged liability and the nature of the damages.

25 If the Court were required to individually review each of the tort cases, a tremendous
26 amount of judicial resources would be drained. Therefore, the only logical and practical approach is
27 for the Court to make a "rough estimate" of the value of the claims requiring estimation for
28 feasibility purposes. In re Thomson McKinnon Sec., 191 B.R. at 989.

1 In addition to seeking estimation of the approximately 450 miscellaneous tort Claims,
2 PG&E will seek estimation by the Court of the Chromium Claims, consisting of the Claims filed by
3 approximately 1,250 individuals alleging exposure to chromium from PG&E's compressor stations
4 near Kettleman, Topock and Hinkley, California. Nearly all of the Chromium Claims were filed by
5 individuals who are plaintiffs in 15 civil lawsuits pending against PG&E in California courts.
6 According to their POCs, these claimants seek to recover approximately \$580 million.⁴⁶ PG&E will
7 propose an estimate for the aggregate value of these Claims based upon such factors as (i) the
8 number of Chromium Claims filed, (ii) the particular PG&E facility from which a majority of those
9 plaintiffs claim exposure to chromium, (iii) the distance from the compressor station to the alleged
10 exposure locations, (iv) the type of claimed exposure (ingestion or inhalation), (v) the types of
11 injuries alleged, (vi) epidemiological data, (vii) scientific literature regarding chromium,
12 (viii) discovery responses, (ix) legal defenses, and (x) the POCs submitted.

13 PG&E's proposed estimated value of the Chromium Claims will also consider prior
14 settlements of other chromium cases. See In re Eagle-Picher Indus., Inc., 189 B.R. 681, 686 (S.D.
15 Ohio 1995) (estimating value of thousands of pre-petition personal injury asbestos cases; basing
16 estimation in part on settlement amounts of prior asbestos cases). Like the estimation process for
17 miscellaneous tort Claims, the estimation for Chromium Claims will be presented by noticed motion
18 to establish an aggregate estimate for Plan feasibility purposes, with no binding effect on PG&E or
19 the individual claimants in the pending cases or for any other purpose.

20 A motion for aggregate estimation is the most reasonable method for determining the
21 estimated value for Chromium Claims. If considered individually, it could take months of
22 evidentiary hearings to resolve them. Each individual claim presents questions regarding the alleged
23 method, duration and concentration of exposure. These issues will ultimately be resolved in the

24
25 ⁴⁶There are approximately 1,450 personal injury Claims alleging chromium exposure,
26 approximately 200 of which PG&E expects will be disallowed as duplicate claims. Approximately
27 1,050 of these individuals filed Claims aggregating approximately \$580 million, and approximately
28 210 of these individuals filed Claims for unknown amounts. PG&E expects that all of the
Chromium Claims (including those that state amounts and those that do not) will be estimated
because it is requesting an aggregate approach to estimation of the Chromium Claims. See
footnote 37 supra and accompanying text.

1 pending litigation. These issues are generally based upon detailed scientific and expert analysis of
2 groundwater contamination and air modeling. The analysis must also include a determination of
3 whether the exposure alleged could have caused the particular ailments claimed. These issues are
4 generally resolved by evaluating expert testimony from toxicologists, epidemiologists, particular
5 disease specialists and other medical professionals. For example, the parties have estimated that
6 trial of 18 test cases involving these issues could take up to six months.

7 That level of detailed analysis for individual cases is not necessary to obtain a
8 reasonable aggregate estimate for Plan feasibility purposes. Instead, the most reasonable method to
9 estimate the approximately 1,250 Chromium Claims for Plan feasibility purposes is to develop an
10 aggregate estimate by considering groups with similar characteristics. For example, an examination
11 of categories of current claims based upon alleged exposure, type of injury and legal defenses can
12 provide a reasonable estimate of the value of the Chromium Claims. Attempting to create that same
13 estimate by reviewing each individual case for each of these parameters to reach an estimate would
14 be a monumental and unnecessary task, given the limited purpose and effect of the estimation. For
15 purposes of applying the feasibility test of Section 1129(a)(11), the aggregate estimation procedure
16 proposed by PG&E is the most reasonable and appropriate estimation method for the Chromium
17 Claims.

18 VIII.

19 EMPLOYMENT CLAIMS

20 Approximately 15 litigants have filed employment-related POCs against the Debtor
21 totaling more than \$110 million. The amounts claimed are inflated in virtually all cases, sometimes
22 outrageously so. One clear indicator of the extent to which employment Claims are very unrealistic
23 is that during the most recent five-year period for which data is fully available (from 1996 through
24 2000), the total paid out by PG&E in connection with employment-related litigation was \$10.78
25 million, or an average of \$2.15 million per year. An expert experienced in the employment
26 litigation field would be able to assist in estimating the actual value of the inflated employment
27 Claims, which assert a variety of statutory and common law violations.
28

1 For example, the largest Claim, seeking over \$40 million, is a complex putative class
2 action lawsuit involving alleged violation of state and federal overtime laws. Specifically, four
3 employees purporting to represent 300 senior new business representatives, distribution engineers,
4 and others "similarly situated" allege PG&E improperly classified them as exempt administrators
5 and/or professionals, thus denying them overtime payments to which they were purportedly entitled.
6 The amount claimed is based on the assumption that all plaintiffs will prevail on all issues. PG&E
7 believes the claims do not meet the criteria for a class action, which then limits the number of
8 plaintiffs to four. Further, PG&E believes that plaintiffs have improperly calculated the number of
9 claimed overtime hours.

10 Several of the other employment Claims allege various forms of disability
11 discrimination, such as failure reasonably to accommodate an alleged disability, or wrongful
12 demotion. For example, one plaintiff, who seeks more than \$36 million, suffers from a degenerative
13 condition and alleges that after years of attempting to accommodate his condition, PG&E
14 wrongfully removed him from his position as a fieldman in response to a physician's
15 recommendation after a fitness for duty exam. PG&E believes that this is a highly inflated claim.

16 One claim for \$10 million is by a short-term former employee of Corestaff Services,
17 Inc., a PG&E contractor, who sued his former employer and several of its employees for wrongful
18 termination, and has named PG&E because it allegedly failed to respond to various complaints
19 plaintiff claims to have made against Corestaff. Corestaff has agreed to indemnify and defend
20 PG&E without reservation of rights. Particularly in view of the provision for indemnification, this
21 Claim has an actual value of zero, and, for Plan feasibility purposes, PG&E should have an
22 opportunity to so demonstrate to this Court.

23 Other Claims in this category requiring estimation allege sex discrimination, including
24 sexual harassment, intentional infliction of emotional distress, retaliation, and/or wrongful
25 termination.

CONCLUSION

Based on the foregoing, PG&E respectfully requests that this Court make and enter its order determining the processes and procedures for estimating the Claims in a timely fashion for purposes of determining the feasibility of the Plan under Section 1129(a)(11).

DATED: March 1, 2002

Respectfully,

HOWARD, RICE, NEMEROVSKI, CANADY,
