401 Church Street, 6th Floor Annex
Nashville, Tennessee 37243-1534

Attention: Ms. Evelyn Haskin, Enforcement & Compliance

Dear Ms. Haskin:

TENNESSEE VALLEY AUTHORITY - DISCHARGE MONITORING REPORT FOR
SEQUOYAH NUCLEAR PLANT

Please find enclosed the Discharge Monitoring Report (DMR) of March 2002 for Sequoyah. Please contact me at (423) 843-6700 if you have any questions or comments.

Sincerely,

A handwritten signature in cursive script that reads "Diedre B. Nida".

Diedre B. Nida
Environmental Supervisor
Signatory Authority

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)
 Toxicity was sampled from February 24, 2002 through March 1, 2002. Report is attached.

April 3, 2002

Diedre B. Nida, SB 2A-SQN

SEQUOYAH NUCLEAR PLANT (SQN) TOXICITY BIOMONITORING, NPDES PERMIT
NO. TN0026450, COMPLIANCE TOXICITY TESTS, FEBRUARY-MARCH, 2002

Attached are two copies of the subject report for submission to the state of Tennessee. The report provides results of compliance testing using fathead minnows. A copy of the report is included for your records.

Outfall 101 samples collected February 24-March 1, 2002, showed no toxic effects to fathead minnows or daphnids. The resulting IC_{25} values, for both species, were > 100 percent. Exposure of fathead minnows and daphnids to intake samples resulted in no significant differences from controls during this study period.

Fathead minnows were also exposed to UV treated Outfall 101 and intake samples since fish pathogens present in intake water have been the suspected cause of interference (anomalous dose response and high variability among replicates) in previous toxicity testing at Sequoyah. Although dose response and survival in the routine compliance test were not impacted enough to jeopardize test acceptability or compliance with permit limits during this study, survival was improved by two minute exposure of samples to UV light prior to introduction of test organisms. These results indicate that fish pathogen interference is likely the cause of historic problems with WET tests for this effluent.

Call me at (256) 386-2755 if you have any questions or comments following your review of the report.

**TENNESSEE VALLEY AUTHORITY
TOXICITY TEST REPORT**

INTRODUCTION/EXECUTIVE SUMMARY

- 1) Facility/Discharger: Sequoyah Nuclear Plant/TVA Report Date: April 3, 2002
- 2) County/State: Hamilton / Tennessee 3) NPDES Permit #: TN0026450
- 4) Type of Facility: Nuclear-fueled electric generating plant
- 5) Design Flow (MGD): 3,266
- 6) Receiving Stream: Tennessee River (TRM 483.6)
- 7) 1Q10: 2,992.4
- 8) Outfall Tested: 101 9) Dates Sampled: February 24- March 1, 2002
- 10) Flow on day(s) sampled (MGD): 1624, 1614, 1569
- 11) Pertinent site conditions: No unusual conditions reported. *
- 12) Test Dates: February 26-March 5, 2002
- 13) Test Type: Short-term Chronic-definitive
- 14) Test Species: Fathead Minnows (*Pimephales promelas*)
Daphnids (*Ceriodaphnia dubia*)
- 15) Concentrations Tested (%): Outfall 101: 10.98, 22, 43.9, 72, 100
Intake: 100
Pimephales promelas: UV treated Outfall 101: 10.98, 22, 43.9, 72, 100
UV treated Intake: 100
- 16) Permit Limit Endpoint (%): Outfall 101 IC₂₅ = 43.9
- 17) Test Results (%): Outfall 101: *Pimephales promelas*: IC₂₅ > 100
Ceriodaphnia dubia: IC₂₅ > 100
UV treated Outfall 101: *Pimephales promelas*: IC₂₅ > 100

- 20) Consultant/Testing Lab Name: Environmental Testing Solutions, LLC
- 21) Lab Contact: Jim Sumner 22) Phone #: (828) 862-8193
TVA Contact: Cynthia L. Russell Phone #: (256) 386-2755

*Production/operation data will be provided upon request.

Notes: Outfall 101 samples collected February 24-March 1, 2002, showed no toxic effects to fathead minnows or daphnids. The resulting IC₂₅ values, for both species, were > 100 percent. Exposure of fathead minnows and daphnids to intake samples resulted in no significant differences from controls during this study period.

Fathead minnows were also exposed to UV treated Outfall 101 and intake samples since fish pathogens present in intake water have been the suspected cause of interference (anomalous dose response and high variability among replicates) in previous toxicity testing at Sequoyah. Although dose response and survival in the routine compliance test were not impacted enough to jeopardize test acceptability or compliance with permit limits during this study, survival was improved by two minute exposure of samples to UV light prior to introduction of test organisms. These results indicate that fish pathogen interference is likely the cause of historic problems with WET tests for this effluent.

METHODS SUMMARY

Samples

1) Sampling Point: Outfall 101

2) Sample Type: Composite

3) Sample Information:

Sample ID	Date/Time Collected (MM-DD-YY/Time)	Date/Time Received (MM-DD-YY/Time)	Arrival Temp. (°C)	Initial TRC* (mg/L)	Date/Time Used (MM-DD-YY/Time)
101	02-24-02/1454 & 1518 02-25-02/1354 & 1418	02-26-02/1105	0.9	<0.10	02-26-02/1522 02-27-02/1514
Intake	02-24-02/1539 02-25-02/1439	02-26-02/1105	0.6	<0.10	02-26-02/1522 02-27-02/1514
101	02-26-02/1026 02-27-02/0926	02-28-02/1045	0.2	<0.10	02-28-02/1516 03-01-02/1500
Intake	02-26-02/1038 02-27-02/0938	02-28-02/1045	0.7	<0.10	02-28-02/1516 03-01-02/1500
101	02-28-02/1335 03-01-02/1235	03-02-02/1058	0.6 [†]	<0.10	03-02-02/1506 03-03-02/1453 03-04-02/1456
Intake	02-28-02/1405 03-01-02/1305	03-02-02/1058	1.1	<0.10	03-02-02/1506 03-03-02/1453 03-04-02/1456

*Total residual chlorine.

[†]Collected in two 2.5-gallon cubitainers. Temperature was measured in each cubitainer upon arrival.

4) Sample manipulation:

Routine samples from Outfall 101 and intake were warmed to test temperature (25.0 ± 1.0°C) in a warm water bath.

Aliquots of Outfall 101 and intake samples used for the side by side UV treated test were warmed to 24°C in a warm water bath and held in a 40Watt Rainbow Lifeguard UV Sterilizer for 2 minutes, prior to exposure of test organisms.

Test Organisms

	<u><i>Pimephales promelas</i></u>	<u><i>Ceriodaphnia dubia</i></u>
1) Source:	<u>Aquatic BioSystems, Inc.</u>	<u>In-house culture</u>
2) Age:	<u>23 hours</u>	<u>< 24 hours</u>

Test Method Summary (See Appendix A for additional information)

	<u><i>Pimephales promelas</i></u>	<u><i>Ceriodaphnia dubia</i></u>
1) Test Conditions	<u>Static, renewal</u>	<u>Static, renewal</u>
2) Test Duration	<u>7 days</u>	<u>Until at least 60% of control females have 3 broods</u>
3) Dilution/Control Water	<u>Moderately Hard Synthetic Water</u>	<u>Moderately Hard Synthetic Water</u>
4) Number Replicates	<u>4</u>	<u>10</u>
5) Animals per Replicate	<u>10</u>	<u>1</u>
6) Test Initiation: (Date/Time)		
Outfall 101	<u>02/26/02-1438 EST</u>	<u>02/26/02-1522 EST</u>
UV Treated Outfall 101	<u>02/26/02-1438 EST</u>	
7) Test Termination: (Date/Time)		
Outfall 101	<u>03/05/02-1430 EST</u>	<u>03/05/02-1520 EST</u>
UV Treated Outfall 101	<u>03/05/02-1430 EST</u>	
8) Test Temperature: Outfall 101	<u>Mean = 24.6 °C</u> <u>(24.1-25.2°C)</u>	<u>Mean = 24.6°C</u> <u>(24.2-25.3°C)</u>

Test Temperature: UV-Treated Outfall 101 Mean = 24.7°C
(24.2-25.5°C)

9) Physical/Chemical Measurements: Hardness, alkalinity, total residual chlorine, and conductivity were measured at the laboratory in each 100 percent sample. Daily temperatures were measured in one replicate for each test concentration. Pre- and post-exposure test solutions were analyzed daily for pH and dissolved oxygen.

10) Statistics: Statistics were performed according to methods prescribed by EPA using ToxCalc version 5.0 statistical software (Tidepool Scientific Software, McKinneyville, CA).

SUMMARY/CONCLUSIONS

Outfall 101 samples collected February 24-March 1, 2002, showed no toxic effects to fathead minnows or daphnids. The resulting IC_{25} values, for both species, were > 100 percent. Exposure of fathead minnows and daphnids to intake samples resulted in no significant differences from controls during this study period.

Fathead minnows were also exposed to UV treated Outfall 101 and intake samples since fish pathogens present in intake water have been the suspected cause of interference (anomalous dose response and high variability among replicates) in previous toxicity testing at Sequoyah. Although dose response and survival in the routine compliance test were not impacted enough to jeopardize test acceptability or compliance with permit limits during this study, survival was improved by two minute exposure of samples to UV light prior to introduction of test organisms. These results indicate that fish pathogen interference is likely the cause of historic problems with WET tests for this effluent.

Appendix A

ADDITIONAL TOXICITY TEST INFORMATION

SUMMARY OF METHODS

1) *Pimephales promelas*

Tests were conducted according to EPA/600/4-91/002 (July 1994) using four replicates, each containing ten test organisms, per treatment. Test vessels consisted of 400-mL polypropylene beakers, each containing 250-mL of test solution.

2) *Ceriodaphnia dubia*

Tests were conducted according to EPA/600/4-91/002 (July 1994) using ten replicates, each containing one test organism, per treatment. Test vessels consisted of 30-mL polypropylene cups, each containing 15-mL of test solution.

DEVIATIONS/MODIFICATIONS TO TEST PROTOCOL

1) *Pimephales promelas*

None

2) *Ceriodaphnia dubia*

None

DEVIATIONS/MODIFICATIONS TO PRETEST CULTURE OR HOLDING OF TEST ORGANISMS

1) *Pimephales promelas*

None

2) *Ceriodaphnia dubia*

None

PHYSICAL AND CHEMICAL METHODS

- 1) Reagents, Titrants, Buffers, etc.: All chemicals were certified products used before expiration dates (where applicable).
- 2) Instruments: All identification, service, and calibration information pertaining to laboratory instruments is recorded in calibration and maintenance logbooks.
- 3) Temperature was measured using EPA Method 170.1.
- 4) Dissolved oxygen was measured using EPA Method 360.1.
- 5) The pH was measured EPA Method 150.1.
- 6) Conductance was measured EPA 120.1.
- 7) Alkalinity was measured using EPA 310.1.
- 8) Hardness was measured EPA Method 130.2.
- 9) Total residual chlorine was measured using EPA 330.5.

QUALITY ASSURANCE

Toxicity Test Methods: All phases of the study including, but not limited to, sample collection, handling and storage, glassware preparation, test organism culturing/acquisition and acclimation, test organism handling during test, and maintaining appropriate test conditions were conducted according to the protocol as described in this report and EPA/600/4-91/002. Any known deviations were noted during the study and are reported herein.

REFERENCE TOXICANT TESTS (See Appendix D for control chart information)

- 1) Test Type: 7-day chronic tests with results expressed as IC₂₅ values in g KCl.
- 2) Standard Toxicant: Potassium Chloride (KCl crystalline).
- 3) Dilution Water Used: Moderately hard synthetic water.
- 4) Statistics: ToxCalc software Version 5.0 was used for statistical analyses.

Sample Custody – Fill In From Top Down

Relinquished By (Signature):	Date/Time	Received By (Signature):	Date/Time
<i>Wanda Allen</i>	2/25/02 1500	<i>Fed Ex</i>	2/25/02 1500
<i>Fed-ex</i>	02-26-02 1105	<i>K9Kleena ETS</i>	02-26-02 1105

Instructions: Clients should fill in all areas except those in the "Laboratory Use" block. Biomonitoring samples are preserved by storing them at 4°C and shipping them in ice. The hold time for each sample is 36 hours from the time of collection. Therefore, please collect and ship in such a way that the laboratory will receive the samples with ample time to initiate testing within that time frame. Samples shipped overnight on Friday via FedEx or UPS must be marked for Saturday delivery or they will not arrive until the following Monday.

Minimum Significant Difference

Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces *Pimephales* growth by 19.5% from the control (determined Lower PMSD bound determined by USEPA (10th percentile) = 9.4%.

Upper PMSD bound determined by USEPA (90th percentile) = 35%.

The lower and upper bounds were calculated by the USEPA using 205 tests conducted from 19 laboratories for *Pimephales* growth in chronic reference toxicant tests.

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces *Ceriodaphnia* reproduction by 13.0% from the control.

Lower PMSD bound determined by USEPA (10th percentile) = 11%.

Upper PMSD bound determined by USEPA (90th percentile) = 37%.

The lower and upper bounds were calculated by the USEPA using 393 tests conducted from 33 laboratories for *Ceriodaphnia* reproduction in chronic reference toxicant tests.

Minimum Significant Difference

Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces *Pimephales* growth by 19.5% from the control (determined through Lower PMSD bound determined by USEPA (10th percentile) = 9.4%.

Upper PMSD bound determined by USEPA (90th percentile) = 35%.

The lower and upper bounds were calculated by the USEPA using 205 tests conducted from 19 laboratories for *Pimephales* growth in chronic reference toxicant tests.

Note:

CV = Coefficient of variation for control survival.

On average, the CV for control growth is 9.0% in Environmental Testing Solutions, LLC *Pimephales* chronic toxicity tests.

Lower CV bound determined by USEPA (10th percentile) = 3.5%.

Upper CV bound determined by USEPA (90th percentile) = 20%.

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces *Pimephales* growth by 19.5% from the control.

Lower PMSD bound determined by USEPA (10th percentile) = 9.4%.

Upper PMSD bound determined by USEPA (90th percentile) = 35%.

CT = Central Tendency (mean Control Growth CV or mean PMSD)

The lower and upper bounds were calculated by the USEPA using 205 tests conducted from 19 laboratories for *Pimephales* growth in chronic reference toxicant tests.

Minimum Significant Difference

PMSD:

16.5

PMSD =

Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a treatment reduces *Pimephales* growth by 19.5% from the control (determined Lower PMSD bound determined by USEPA (10th percentile) = 9.4%.

Upper PMSD bound determined by USEPA (90th percentile) = 35%.

The lower and upper bounds were calculated by the USEPA using 205 tests conducted from 15 laboratories for *Pimephales* growth in chronic reference toxicity tests.

USEPA 2003. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-001, US Environmental Protection Agency, Cincinnati, OH.

Note:

CV = Coefficient of variation for control reproduction.

On average, the CV for control reproduction is 9.1% in Environmental Testing Solutions, LLC

Lower CV bound determined by USEPA (10th percentile) = 8.9%.

Upper CV bound determined by USEPA (90th percentile) = 42%

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces *Ceriodaphnia* reproduction by 13.0% from the control.

Lower PMSD bound determined by USEPA (10th percentile) = 11%.

Upper PMSD bound determined by USEPA (90th percentile) = 37%.

CT = Central Tendency (mean Control Reproduction CV or mean PMSD)

The lower and upper bounds were calculated by the USEPA using 393 tests conducted from 33 laboratories for *Ceriodaphnia* reproduction in chronic reference toxicant tests.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

Dunnett's MSD value: 2.571

PMDS: 11.1

MSD = Minimum Significant Difference

PMDS = Percent Minimum Significant Difference

PMDS is a measure of test precision. The PMDS is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces *Ceriodaphnia* reproduction by 13.0% from the control.

Lower PMDS bound determined by USEPA (10th percentile) = 11%.

Upper PMDS bound determined by USEPA (90th percentile) = 37%.

The lower and upper bounds were calculated by the USEPA using 393 tests conducted from 33 laboratories for *Ceriodaphnia* reproduction in chronic reference toxicant tests.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)
 During this reporting period, there has been no flow from the Dredge Pond other than that resulting from rainfall.
