SUBJECT: NRC INSPECTION REPORT 01-02861-05/02-02

Dear General Nilo:

On April 3, 2002, the NRC completed an inspection at the Pelham Range burial area at Fort McClellan, Alabama. The purpose of the inspection was to determine whether decommissioning activities authorized by the license were conducted safely and in accordance with Nuclear Regulatory Commission (NRC) requirements. At the conclusion of the inspection, the findings were discussed with members of your staff identified in the enclosed report. The enclosed report presents the results of this inspection. The results of the analysis of the soil samples obtained on January 28, 2002, are also included in this report.

The inspection was an examination of activities conducted under your license as they relate to radiation safety and compliance with the Commission's rules and regulations and with the conditions of your license. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel and observations of activities.

In accordance with 10 CFR 2.790 of NRC's "Rules of Practice," a copy of this letter and enclosures will be available electronically for public inspection in NRC's Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC web site at <http://www.nrc.gov/reading-rm/ADAMS.html> (the Public Electronic Reading Room).

Should you have any questions concerning this letter or report, please contact us.

Sincerely,

/RA/

Thomas R. Decker, Chief
Materials Licensing/Inspection Branch1

Division of Nuclear Materials Safety

EXECUTIVE SUMMARY

DEPARTMENT OF THE ARMY
FORT MCCLELLAN, ALABAMA
NRC INSPECTION REPORT NO. 01-02861-05/02-02

This routine inspection was conducted to evaluate the licensee's progress in decommissioning the burial mound located at the Pelham Range at Fort McClellan, Alabama.

The inspector determined that the burial mound remediation was complete and shipment of the waste and contaminated dirt removed from the mound was in progress. No violations were identified.

REPORT DETAILS

1. Scope

This special, announced inspection was conducted to determine whether decommissioning activities authorized by the license were conducted safely and in accordance with Nuclear Regulatory Commission (NRC) requirements and the licensee's approved Decommissioning Plan.

2. Observations and Findings

The Army is in the process of decommissioning a radioactive material burial mound at the Pelham Range. The inspector observed that remediation is complete. All the waste and contaminated dirt found in the burial mound has been packaged and moved to a staging area near Gate 5 at the Pelham Range to allow for removal by tractor trailers. On March 27, 2002, the licensee's materials license was amended to add this additional place of use. The licensee's contractor is nearing completion of the final survey of the burial mound site and will perform a walk over survey of the shipment staging area when the final waste shipment is complete. Prior to moving the shipping containers to the staging area, the exteriors of the containers were wipe tested for contamination and none was detected. The licensee roped off the staging area and performed a dose assessment to ensure that dose rates were below 2 mr/hr at the perimeter of the storage area. The inspector was not able to confirm these readings at the time of the inspection due to hazardous work in the area; access to the area is limited to specific times of the day.

The licensee will include all shipping papers for the waste shipments with the final survey report. Shipping papers reviewed during the inspection were found to be complete and correct.

The remaining work at the Pelham Range is as follows: completion of the burial mound and staging area surveys, completion of the "flyover" survey of the Pelham Range, and installation of ground water monitoring wells to evaluate the ground water in the area of the burial mound.

3. Conclusion

The licensee was in compliance with its approved decommissioning plan and regulatory requirements. No violations were identified.

EXIT MEETING SUMMARY

The inspector discussed the inspection results with the Radiation Safety Officer on April 3, 2002. The licensee was advised that no violations were identified.
