SERVED OCT - 3 2002

Attention: Rulemaking and Adjudications Staff

Dear Commissioners:

This letter is to strongly urge you to deny P G & E's request to increase storage of high-level radioactive waste at the Diablo Canyon nuclear power plant.

Production of high-level radioactive waste is highly irresponsible when there is no safe long-term repository for it.

None of us, in good conscience, should even consider continued production of this highly hazardous waste when there is no safe long-term storage available.

The question we should be asking is not how to store more of this waste, but instead, how quickly can we stop all production of high-level radioactive waste and put zero hazardous emission facilities on line.

You have a moral responsibility to future generations to stop, at the earliest possible moment, the production of high-level radioactive waste.

Sincerely,

Vicki Bookless

To whom it may concern:

Hello, I am a citizen of Grover Beach, CA, because I live so close to our Nuclear Power Plant, Diablo Canyon, I was wondering on how our plant disposes its expended fuel. I have no problems with nuclear energy, in fact I enjoy it.

If it is possible, I would very much enjoy information on the ways you dispose of the waste. Also, I was wondering how you transported the waste. I have heard they do it by truck, but could they do it by air, maybe using a helicopter such as the construction type model aircraft. If you could send me a response I would enjoy that gratefully.

I like nuclear power a great deal, what can I do to promote its growth? I believe that nuclear power will have a great impact on our society's future. Thank you for listening to what I had to say, I appreciate your time.

I am a citizen of San Luis Obispo and have been since 1968. I am concerned about the above ground nuclear waste issue and have not formally let my views be known prior to this time. Generally speaking I am in favor of nuclear power for electricity production. Secondly, I would not want the situation that would result without electricity. I depend on it too much in my life for my existence and comfort. Thirdly, I fit the definition of a "Nimby" (Not in my back yard) for the storage of nuclear or any other waste product. Fourthly, I am willing to do my share in dealing with waste storage for the power that I use and the conveniences I appreciate due to nuclear plant operation, or for that matter the air pollution from coal and oil fired power plants. That's just part of the give and take mature people learn to accept.

If one assumes that potentially unhealthy by products result from electricity generation, then those people using the electricity must share the responsibility for waste disposal. So the bottom line is Los Angeles and other large population centers must dispose of or store their share of nuclear waste products. They (or we in San Luis Obispo) must accept our fair share of the nuclear waste produced by our electricity use. Now it would be ideal if we had another backyard to use like in the Nevada desert or the California desert for that matter. But then it would be someone else's problem for ? years. and their grandchildren, ad infinitum, however long nuclear waste stays potentially dangerous. But in the end I feel that the benefits outweigh the potential hazards by a considerable margin.

I support the use of nuclear energy for the production of electricity with all of its downside as perseverated upon by the antinuclear contingent.
