Mr. Johnson , I would ask that LES not be given a license for a plant in Hartsville Tennessee. According to the papers Les would leave the tailings on site . LES says for a temporary amount for time which is undetermined and could be for many years. The site where this plant would be located is less than 1/4 of a mile from the Cumberland River. This river supplies most of middle Tennessee with its drinking water supply. I ask that not only this but the simple fact if this plant was so safe and environmentally sound why would it not be built in New York City , Chicago , or even Washington D.C. I also understand that more than 90% of NRC money comes from the cost of license. This looks as if NRC will grant a license to any company with money. I really don't want to seem harsh but would you want this in your backyard. What Les and NRC does at Hartsville will affect future generations of Middle Tennesseans. So in closing I once again ask that this license not be granted for best interest of all.
