Rules and Directives  
Branch

Mr. Lesar,

I am opposed to the proposed Uranium Enrichment facility in Hartsville, Tennessee. I think that there will be a lot of uranium trailings that will be left over that will sit around in Trousdale County for a long time.

I heard Mr. Dials speak at the public hearing in Hartsville last month and he didn't convince me that there was an effective plan to dispose of this uranium in 90 days. I heard one of the other people say that it could stay for years and years. If you could convince me this waste would be disposed of in a timely manner <sup>over</sup>

E-RTDS=ADM-03

Call = T. Johnson (705)

Memphis=ADM-013

then perhaps I would be convinced to support this facility. However, based on the information provided to me by Citizens for Smart Choices I am convinced this material will

sit around in Hartsville for years and it will not go anywhere but into the water and into the soil (residually) around the facility. This is not fair to the people of Hartsville or the people of Tennessee.

This low level radioactive waste is not good for the environment so I urge you, Mr. Lesar to please consider this statement and not grant a license to LES for their proposed facility in Hartsville.

Sincerely,

Paul Dugan
