Dear Sir:

Mr. Reference to the 155 uranium enrichment plant for Shovelale County. I am opposed to a radioactive product plant being located here. I am aware that we have laws to protect our environment such as Highway littering, protecting our wetlands and laws to keep everyone traveling in seat belts and do not what might drink or get related activities near our school and churches and we consider a radioactive product to pollute our air and possibly our water and waste to play integrally in the night. We have heard "No danger" when asbestos was put in building 50 years ago, who thought it would be dangerous to this generation? Please consider the potential hazard of this product. Please know that the area you location is good proved as it has been under water before, understand the product needs completely dry condition.

Thank you,
Alvin J. Givens
President of Shovelale County
