Subject: Davis Besse peer review

At the RES staff meeting yesterday, the issue of RES review of the Davis Besse head corrosion risk characterization was discussed. Ashok is very interested in an RES independent review. He wants it to be timely, but not so quick that we gloss over key elements without some careful consieration. OERAB would be responsible for the risk characterization methodology and scope. MEB would be responsible for fracture mechanics methods and results review. The contact for MEB is Mark Kirk (sp?). I would like a briefing as soon as practical sometime next week.
