Mr. Gilles:

It has come to my attention that in Clinton, IL, plans have been set up to build a second nuclear reactor at the Clinton power plant. Being that it is now undeniable that nuclear power has no place in the future of our society (that is, assuming we want to create a safe future), my outrage and the outrage of countless other citizens that I have come in contact with should come as no surprise.

However, assuming that this horrid plan does go as planned, many questions arise that have not been expressed to the public adequately. For example, is there ample room to store the waste generated by another reactor? Will such waste need to be transported at any point in the future? How committed are officials to keeping all of the concerns of the public intact?

Perhaps the question that needs addressing immediately is information regarding the early site permit that the plant is planning to apply for very soon. Are there any specifics that I can get about this?

Given the effectiveness of alternative sources of energy (such as the windfarm being built in Bureau County), there is no reason why yet another nuclear reactor should be built in Illinois, already the nation's largest nuclear threat. People are becoming angry, and we need answers.

Sincerely,
Matthew D. Hindman
