Subject: Controlling the disposition of solid materials

To: Staff

The only alternative which is remotely acceptable is to dispose radioactive Materials in an NRC or Agreement state-licensed radioactive waste disposal site.

This alternative is far from perfect because it will still allow some poisonous leakage. However, it is the best of rotten alternatives.

To continue releasing radioactive waste into unrestricted commerce, as is presently done, is not only insane, but it is morally depraved.

What kind of people do you have, that would even consider unrestricted dispersal?

Shame on them!

Very truly yours,

Sidney J. Goodman, PE, MSME
