Dear Sir or Madam:

I am writing in regard to Draft NUREG-1768. I have examined the cask standards, and it is my belief that they do not fully take into account the effects of numerous accident scenarios: train derailments, possible punctures, heat from fires, etc. I believe these casks should be tested to FAILURE LEVELS, regardless of however miniscule the chance of accidents might be. Thanks for your consideration.

Sincerely,  
Daniel Jameson
