Subject: No Cordova relicensing

68 FL 12385

(2)

Dear NRC,

I would like my comments added to the input of the Cordova relicensing period.

The Cordova plant should not be relicensed. Nuclear power is neither safe nor cheap.

The Cordova plant has a history of problems that will only become more dangerous as the plant ages.

Until a way is found for safe disposal and rendering safe the byproduct of nuclear energy it is not a safe energy source.

There are other sources of energy that are renewable and environmentally safe such as wind and solar that would also create good, high paying jobs.

Cordova was designed for a specific life span. That life span is coming to an end. Retire it, don't keep that time bomb in operation.

Sincerely,

David Olson
