Subject: Comment: Disposition of Nuclear Waste.

**DOCKET NUMBER**  
**PROPOSED RULE** **PR 20**  
**(68 FR 09595)**

Nuclear waste should be sent to licensed dumps. None of it should be released since no one knows the cumulative effect of many different "harmless" doses combined. The very word "dose" is abhorrent. Imagine we should willingly dose our population with poison! Rather than considering releasing more such materials, NRC should concern itself with looking into possibilities for limiting the use of radioactive material.
