

DOCKET NUMBER
PROPOSED RULE PR 20

68FR09595

From: <djhonicker@msn.com>
To: <Secy@nrc.gov>
Date: Thu, Jun 26, 2003 10:52 AM
Subject: Radioactive waste recycle into the market place

1734

RE: Rulemaking on Controlling the Disposition of Solid Materials, (Radioactive Waste & Material Release, Recycling, Dispersal, Scoping Process for Environmental Issues,

Federal Reg. Feb. 28, 2003, Vol 68, No 40, pp 9595, 9602

Option 5 is the only option that is in the public interest.

All the other options are clear evidence that the NRC is not meeting its obligation of protecting the public health but is only interested in increasing the wealth of the nuclear industry.

Do you have any biologist working for you? Even an elementary knowledge of cell biology would provide you with these facts:

- (1) There is no safe level of radiation.
- (2) Even a small dose of radiation is capable of cell mutation.
- (3) A mutated cell can develop into cancer, leukemia, birth defects, and can be transferred to future generations.

Years ago when this issue of "radioactive frying pans" was first proposed, over 5,000 people responded, with all but a very few being opposed to the whole idea.

The most memorable response was not from me, but from someone whose name I can't remember. It was simply "YOU FOOLS, WHAT ARE YOU TRYING TO DO - KILL ALL OF US?" That comment is still appropriate

Sincerely,

Jeannine Honicker
