

DOCKET NUMBER

PROPOSED RULE PR 20
68FR09595

1735

From: Gary H Bauer <garyhbauer@webtv.net>
To: <secy@nrc.gov>
Date: Thu, Jun 26, 2003 11:09 AM
Subject: RADIOACTIVE WASTE

Dear NRC,

To allow radioactive waste to be used to produce household products that every American uses, is absolutely absurd.

The primary purpose of the NRC is to protect the health and welfare of the American public.

To not do this, violates your whole purpose of existence.

The solution to deal with radioactive wastes is to render all past and present radioactive wastes harmless to the environment. This can be done on site, using the Roy Transmutation, or other similar technology, and should be a priority for your existence. Use of this technology would allow the use of nuclear generated power, the reduction of nuclear weapons and could be accomplished without further endangering the American population from the transporting and temporary storage of radioactive waste.

Sincerely,

Gary H. Bauer
Wheatfield, New York
