DOCKETED  
USNRC

July 8, 2003 (2:26PM)

OFFICE OF SECRETARY  
RULEMAKINGS AND  
ADJUDICATIONS STAFF

DOCKET NUMBER  
PROPOSED RULE PR 20  
(68FR09595)

Secretary  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555

Attention: Rulemaking and Adjudications Staff

To Whom it May Concern:

The Department of Energy (DOE) appreciate the opportunity to participate in the May 21-22, 2003, workshop on alternatives for controlling the disposition of solid materials that originate in certain areas of Nuclear Regulatory Commission (NRC) licensed facilities and that may contain no or very small amounts of radioactivity resulting from licensed operations. As we noted at the workshop, this is a very important rulemaking and DOE supports NRC's efforts to carefully evaluate options for managing these materials. The workshop provided a useful and constructive exchange of information and built upon previous efforts.

We believe the recent publications by the National Council on Radiation Protection and Measurement and the National Academy of Science provide useful source material that identify a useful starting point for development of a risk-based standard. We believe the alternatives identified at the workshop include most reasonable alternatives and that the NRC should consider both national and international consensus standards in their analyses. In general, we believe the most effective approach will include appropriate use of several of the alternatives in a systematic property management system.

Although the NRC rule does not directly apply to DOE operations, DOE's goal is to maintain standards that are consistent with standards that apply to the commercial sector, so your process is of great interest to DOE. DOE looks forward to continued participation in NRC workshops and other opportunities to share information with the Commission staff relating to the control and release of property. Where possible, we also look forward to sharing technical information such as modeling and data analysis and will provide data and information DOE develops that may be pertinent to NRC's efforts as they become available.

Sincerely,

for Andy Lawrence  
Director  
Office of Environmental Policy and Guidance
